

## April 2010 - Top Cows Ranked by Genomic Jersey Performance Index™ (GJPI).

The 151 cows having a genomic Jersey Performance Index™ (GJPI) of 100 and higher are listed in rank order. Ties are broken by PTA protein.

To qualify for this list, cows must (1) have registry status of HR (no prefix), GR or PR; (2) have a genomic genetic evaluation; (3) must have calved within the past 27 months; and (4) not have a termination code associated with the current lactation.

Genomic evaluations are calculated by the Animal Improvement Programs Laboratory from one of three sources of information. The source is identified in

the column labeled GT as follows: T, cow was genotyped; I, genotype for this cow was imputed from genotypes of progeny, but the cow is not genotyped; and A, evaluation includes information from genotypes or imputed genotypes of ancestors, but cow is not genotyped.

Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on April 1, 2010.
