JERSEY GENETIC SUMMARY

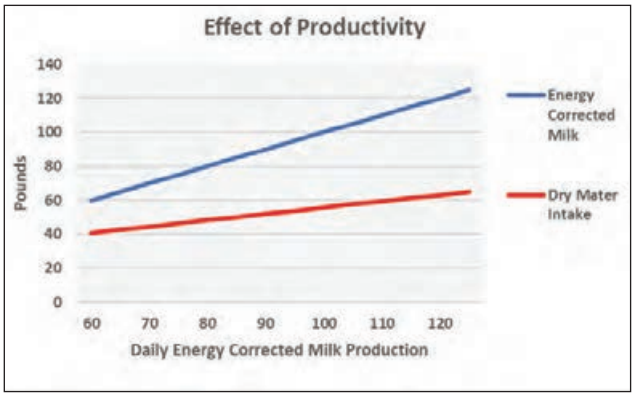
USJersey

Making More Productive, Longer-Lived Jerseys

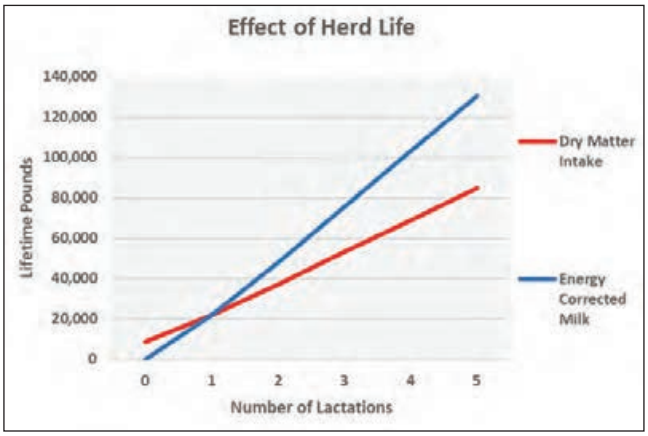
December genetic summaries mark a new era for Jersey Performance Index and Jersey Udder Index. The two formulas have been revised and recalculated to improve the profitability of the Jersey breed.

The purpose of Jersey cows is to produce food and to do this while using fewer resources, in particular feed. This is accomplished through two factors, increasing productivity and length of life.

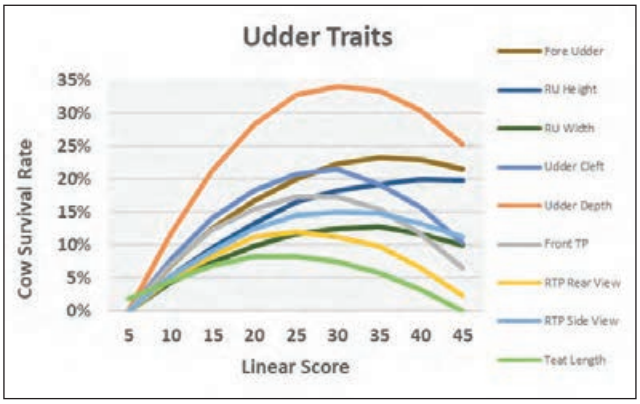
Cows with greater fat and protein production use a higher percentage of their feed consumption to produce food instead of to just maintain themselves. The chart below demonstrates this effect by comparing pounds of daily energy corrected milk production to pounds of daily dry matter intake required for a Jersey cow weighing 1,100 pounds.



Increasing the length of life (longevity or survival) of animals reduces the amount of feed used by non-producing animals (heifers) in the herd. The top chart in the second column demonstrates this effect by comparing the total lifetime energy corrected milk production to the total lifetime dry matter intake required for a Jersey cow that weighs 1,100 pounds and produces 90 pounds of energy corrected milk at maturity as the number of lactations increases.



The updated formula for JPI released with this genetic summary places the focus on productivity and longevity of cows. Additionally, survival information from an AJCA funded study of 298,000 Jersey cows appraised in first lactation was used to determine which type traits contribute the most to survival and longevity and so should be included in JPI. Changes were made to the formula for type traits in JPI and JUI to reflect the true contribution to survival across all linear scores as shown in the graph below where many traits have an intermediate optimum where cows with extreme scores have lower survival rates.



Dairy producers can use updated JPI and JUI values to select those animals that will improve the profitability of their operation by making cows that are more productive and live longer.

Table 3. Heritability Estimates of Selected Traits

Trait	Heritability[1] (h^2)
Yield traits: milk, fat, protein	0.23
Productive Life	0.08
Livability	0.013
Somatic Cell Score	0.12
Daughter Pregnancy Rate	0.014
Cow Conception Rate	0.016
Heifer Conception Rate	0.01

[1] Proportion of observed differences in a trait between individuals attributed to transmittable genetic factors, rather than environmental factors

Glossary of Terms

Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), Heifer Conception Rate (HCR): Genetic evaluations of fertility. DPR is the percentage of non-pregnant cows that become pregnant during each 21-day interval where 1% in PTA DPR equals 4 fewer days open. HCR and CCR is the percentage of inseminated heifers or cows that become pregnant at each service where 1% in PTA means more likely to become pregnant during that estrus cycle compared with an evaluation of 0.

Early First Calving (EFC): Measures the age at first calving in days with the sign reversed so positive PTAs are favorable.

Expected Future Inbreeding (EFI): Estimate of future progeny inbreeding, assuming that an animal is mated randomly.

Genomic "G" Codes: GT, animal has been genotyped using one of a variety of offered chip densities (e.g., GT13K with 13K chip); GI for genotype through imputation from progeny, but not genotyped; and GA, inclusion of information from genotyped ancestors.

Genomic Future Inbreeding (GFI): Estimate of inbreeding in future offspring, based on parent's actual homozygosity and percentages of genes in common with the genotyped breed population.

Genomic Predicted Transmitting Ability (GPTA): Estimate of genetic merit for indicated trait calculated from (1) information from genotypes or imputed genotypes of ancestors DNA analysis of functional genes inherited by a particular animal; plus (2) individual performance and (3) pedigree information.

Gestation Length (GL): Expressed in days, PTAs represent the influence of a service sire on the gestation length a female carries a calf.

Health Trait Index (HTI): Ranks animals for disease resistance.

Jersey Performance Index™ (JPI): Ranks animals for combined genetic merit for Protein, Fat, Milk Density, Fertility, Functional Trait Index (FTI), Survival, SCS and Jersey Health Traits.

Jersey Udder Index™ (JUI): Based on the Functional Trait Index (FTI) weightings for udder traits *(refer to formula, page 6).*

Livability (LIV): Measures cow's ability to stay alive while on the farm.

Net Merit dollars (NM$, also CM$, FM$ and GM$): Expected lifetime profit as compared with the breed base cows born in 2010, for four production/economic conditions.

Parent Average: Estimate of an individual's eventual PTA based on the average of the parents' traditional PTAs.

Percentile: A ranking relative to the population. For example, a bull with a 90 percentile ranking or a heifer that is a P9 is ranked higher than 90 percent of the population.

Predicted Transmitting Ability (PTA): The best predictor of genetic merit; specifically what a bull or cow is expected to transmit for a particular trait to their offspring. *See also GPTA (above).*

Productive Life (PL): Measures a cow's ability to avoid either dying on the farm or being culled.

Sire Conception Rate (SCR): Phenotypic predictor of bull fertility, expressed as a relative conception rate, measured for the first seven (7) breedings of the cow (no heifer breedings).

Somatic Cell Score (SCS): Indicator trait for mastitis resistance based on the direct measure of somatic cells in milk samples.

2023 Jersey Performance Index™ (JPI)

Updates to Jersey Performance Index™ and Jersey Udder Index™ (JUI) authorized by the American Jersey Cattle Association (AJCA) Board of Directors will be implemented with the December 2023 official Council on Dairy Cattle Breeding (CDCB)-AJCA genetic evaluations.

"JPI_{2023} is a strategy to identify high-performing, healthy, and long-lived Jersey cows, while driving the breed to higher protein production," AJCA Executive Secretary Neal Smith said. "The new JUI index follows the same strategy as the performance-based JPI_{2023} index as it rewards high-performing, long-lived cows with durable udders. These two indexes are a positive step for the breed."

The new weights of JPI_{2023} were approved by the Board of Directors of the AJCA at a special meeting on September 28.

Calculating Jersey Performance Index™

To calculate JPI_{2023} the following formula will be utilized.

PTA	Weight	Formula
PROT	30%	30 x PROT / 21.81
FAT	25%	25 x FAT / 27.10
PL	10%	10 x PL / 1.53
CCR	8%	8 x CCR / 1.58
DPR	7%	7 x DPR / 1.49
SCS	-5%	-5 x (SCS - 3) / 0.11
MAST	5%	5 x MAST / 1.19
UD	4%	4 x (2.5 - |UD - 2.5|) / 1.25
FU	4%	4 x FU / 1.01 if FU < 3 or 4 x 3 / 1.01 if FU > 3
RUH	2%	2 x RUH / 0.91 if RUH < 4 or 2 x 4 / 0.91 if RUH > 4
JPI		SUM of above values

JPI Advisory Committee

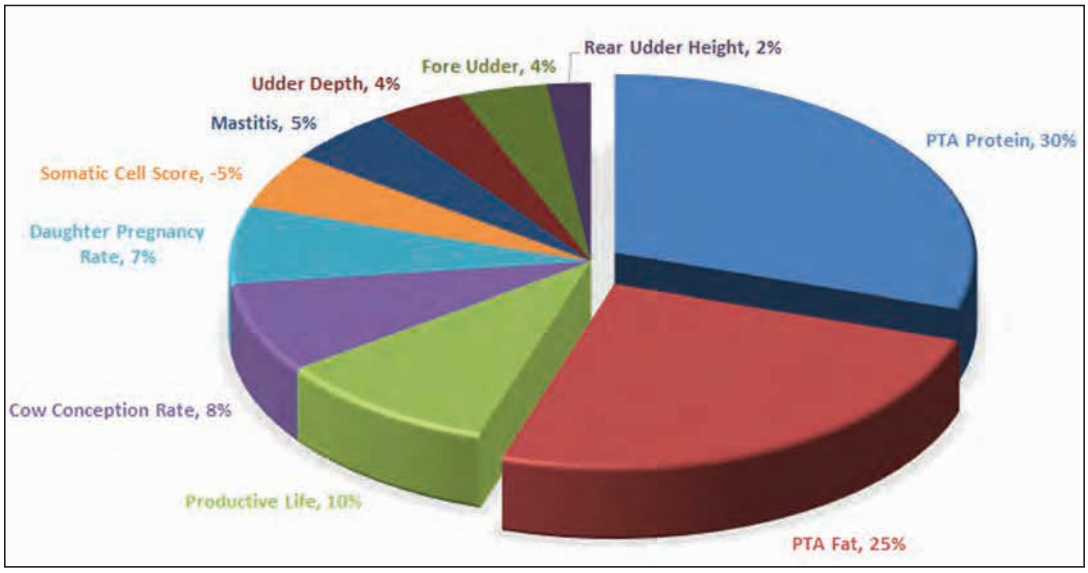
In 2021, a commitee was established to monitor the genetic progress of the Jersey breed, advise on development of JPI and make recommendations to the AJCA Breed Improvement Committee.

The committee consists of three board members, three Jersey breeders, two A.I. representatives and two geneticists. Cari Wolfe, retired genetics and research coordinator for the association and now John Metzger, genetic consultant, have led the committee. Committee members include AJCA board members Joel Albright, Willard, Ohio, Cornell Kasbergen, Tulare, Calif., and Donna Phillips, Newton, Wis.; Michael Hurst, Waynesville, Ohio; and Herby Lutz, Chester, S.C., from the A.I. industry; and Tom Seals Beaver, Ore., Walter Graves, Dundas, Ill., and Ethan Haywood, Hastings, Mich., as the breed representatives. Dr. Kent Weigel and John Metzger represented the geneticists.

Breaking Down JPI_{2023}

JPI_{2023} will have 55% of the emphasis on production (+6% from the previous version), 15% on fertility, 10% on survival traits (+2% from previous version), 10% on udder traits, and 10% on health traits. Traits included and their weights are PTA Protein, 30%; PTA Fat, 25%; Productive Life, 10%;

(continued to next page)



The new weights of JPI_{2023} are shown in Chart 1. Fifty-five percent of the formula is on production, while 15% is on fertility, 10% on survival, 10% on udder traits and 10% on health traits.

Table 1. History of Traits and Weights (%) Used to Calculate Production Type Index (1998) and Jersey Performance Index™.

Year	Protein	Fat	CFP Milk/ Milk Density	FTI	PL	LIV	SCS	FUI	DPR	CCR	HCR	HTI	MAST	FU	RUH	UD
1998	55.5	22.2		16.7			5.6									
2002	50.0	20.0		15.0	5.0		5.0	5.0								
2005	50.0	20.0		15.0	3.75		3.75	3.75	3.75							
2006	40.0	20.0		15.0	12.0		3.0	3.0	7.0							
2010	42.0	15.0		15.0	12.0		6.0		10.0							
2015	43.0	15.0		15.0	10.0		6.0		7.0	2.0	2.0					
2017	30.0	15.0	8.0	20.0	6.0	4.0	6.0		7.0	2.0	2.0					
2020	27.0	19.0	3.0	19.4	5.0	3.0	4.5		9.0	3.5	2.0	4.6				
2023	30.0	25.0			10.0		5.0		7.0	8.0			5.0	4.0	2.0	4.0

(continued from previous page)

Cow Conception Rate, 8%; Daughter Pregnancy Rate, 7%; Somatic Cell Score, -5%; Mastitis Resistance, 5%; Udder Depth, 4%; Fore Udder, 4%; and Rear Udder Height, 2%.

The inclusion of udder depth, fore udder and rear udder height traits to the JPI_{2023} formula are a direct result of the findings from the Risk of Culling study done by Dr. Kent Weigel and associates at the University of Wisconsin-Madison in 2022.

With the new formula emphasis has been placed on increasing production and longer herd life while maintaining strongly attached udders. Some rescaling and reranking is to be expected in December as the focus on herd health with mastitis, components and udder depth has been increased.

Jersey Udder Index Updates

The AJCA board of directors also approved a new JUI formula at the September meeting.

The formula is designed as a standalone publishable index for the first time.

Weightings in JUI will change to 23% udder depth, 18% rear udder height, 17% fore udder; 15% rear udder width, 7% udder cleft and 5% each for teat placement, rear teat placement rear view, rear teat placement side view and teat length.

Additionally, emphasis was shifted in the JUI formula by making udder cleft, udder depth, teat placement, rear teat placement rear view, rear teat placement side view and teat length two-way traits with an intermediate optimum. Fore udder, rear udder height and width will now be capped at maximum value.

Summary

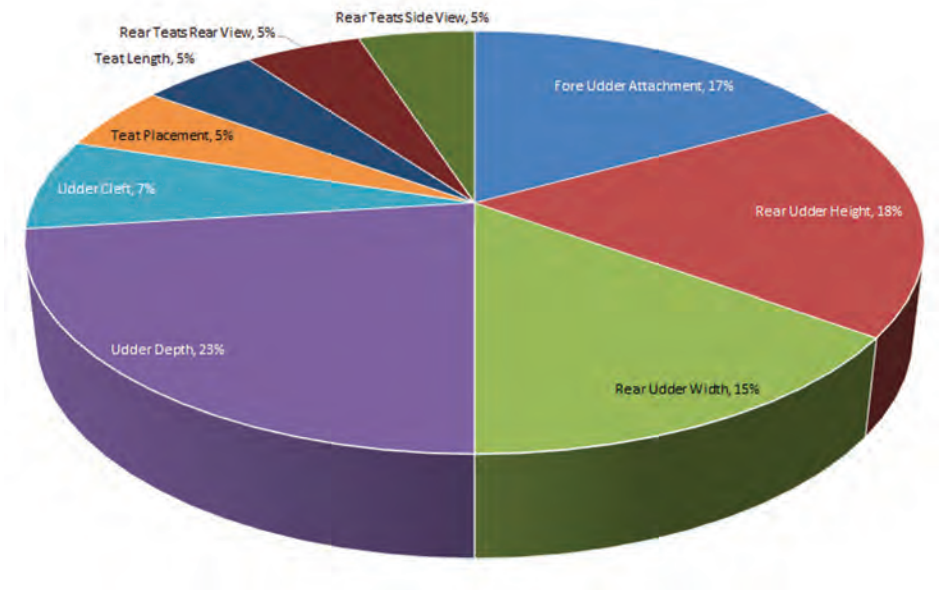
Jersey Performance Index™ is a breed-specific selection tool that has been continually reviewed and updated based on sound science and relative to current economic conditions since 1998. Jersey Udder Index™ was added in 2015 to the formula.

"The update to JPI reiterates the importance of the index to continuing breed improvement," said John Metzger. "It is a management tool that will assist the dairy breeder in making high-producing, long-lived, and trouble free cows in their herd."

Calculating Jersey Udder Index™

To calculate JPI_{2023} the following formula will be utilized.

PTA	Weight	Formula
FU	17%	1.7 x FU if FU < 3 or 1.7 x 3 if FU > 3
RUH	18%	1.8 x RUH if RUH < 4 or 1.8 x 4 if RUH > 4
RUW	15%	1.5 x RUW if RUW < 3 or 1.5 x 3 if RUW > 3
UC	7%	-0.7 x |UC|
UD	23%	2.3 x (2.5 - |UD - 2.5|)
TP	5%	-0.5 x |TP|
RTR	5%	-0.5 x |RTR|
RTS	5%	-0.5 x |RTS|
TL	5%	-0.5 x |TL|
JUI		SUM of above values + 10



Udder depth, rear udder height and width make up 56% of the Udder Index. These traits were deemed the most viable in the Risk of Culling research conducted at UW-Madison in 2022 by Dr. Kent Weigel.

For more information on Jersey genetics, visit the Green Book on USJersey.com or contact John Metzger at jmetzger@USJersey.com.

Explanation of Headings for Summarized Bulls: Left Page

Name of Bull	Registration Number	GT	BBR	JH1	JNS	NAAB Code	JPI	No. Hrds	No. Daus	REL %	Milk	% Fat	Fat	% Prot	Prot	CM$	NM$	FM$

Heifer and Bull Percentile Ranking Levels (P-Level)

The P-level is a useful tool to evaluate genetic merit of young Registered Jerseys™. It is a percentile ranking of the animal's Jersey Production Index™, displayed as P0 through P9. P-level is based upon Parent Average JPI, or genomic JPI when available.

The P-level indicates how one animal ranks compared to all other registered Jerseys of the same sex born in the same year. To interpret, insert the P-level in the blank in the following statement: "This heifer (bull) has a higher PA JPI than __0 percent of the registered Jersey heifers (bulls) born in the same year." *Example:* A P8 heifer born in 2022 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2022.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2018 to 2023 and projected for 2024.

P-levels are printed on Official Performance Pedigrees for heifers, but not for bulls.

Table 1. Heifer P-Levels for Jersey Performance Index™

Information Presented on AJCA Performance Pedigrees

1. AJCA registration name and registration number.
   Prefix and suffixes designate registry status if other than Herd Register *(seven or more generations of AJCA-recorded ancestry with no ancestor of another breed).*
   The Generation Count suffix indicates that the animal's pedigree includes either (a) an unknown animal or (b) an animal of another breed. The number between braces **{ }** indicates generations of AJCA-recorded ancestry from 0 to 6.
   The prefix JX indicates that the animal has one or more ancestors of another breed within six (6) generations.
   The prefix UR is assigned when an animal has permanent identification but does not meet AJCA pedigree requirements.
   Other suffixes used are P (polled); PP (tested homozygous polled); ET (embryo transfer); ETS (split embryo); ETN (nuclear transfer, cloning); LL (carrier of genetic abnormality Limber Legs); RVC (carrier of genetic abnormality Rectovaginal Constriction); PTL (progeny tested for LL); and PTR (progeny tested for RVC).
2. GT indicates that an animal has been genotyped. Density of the test chip is indicated (e.g., GT29K from 29K chip). GI indicates that the genotype was imputed from progeny; and GA, that genomic data comes from genotyped ancestors.
   Breed Base Representation (BBR) is the genomic estimate of the animal's relationship to the Jersey breed reference group. BBR is printed only for genotyped animals. A BBR of 94 or greater is reported as 100. BBRs below 94 are reported as calculated.
   Official status for Jersey Haplotype 1 based on a 6K genotype or higher density is listed: F marks status Free, C defines status Carrier. Official status for Jersey Neuropathy with Splayed Forelimbs (JNS). Carriers are marked with a C designation; TF marks free status from a test; PF designates they are free based on parentage after testing. *Males only:* If assigned, the NAAB code is printed.
   If an animal is tested for A2 status it will be printed in this section.
3. The date of birth (month, day, year) and, for cows, the DHI processing center control number (CONTROL #).
4. Permanent identification of the animal, labeled by form: tattoo (right ear / left ear), American ID eartag and/or electronic ID.
5. For heifers, the percentile (P-level) of the Parent Average (PA) or genomic PTA for Jersey Performance Index™ (JPI) is printed. P-level indicates how this individual ranks compared to other heifers born in the same year. When PA JPI is not available, the P-level is based upon PA protein.
   Expected Future Inbreeding (EFI), or if animal is genotyped, Genomic Estimate of Future Inbreeding (GFI). EFI estimates future progeny inbreeding, assuming the animal is mated randomly to the current population. GFI is based on the animal's DNA test of actual homozygosity and percentages of genes in common with the genotyped Jersey population.
6. *Cows only:* Predicted Producing Ability (PPA) and Yield Deviation (YD) for milk, fat and protein. PPA predicts future production. PPA is the most effective tool to identify cows that will be profitable milk producers across herds. YD is the weighted average of lactation yield minus selected management and environmental factors, expressed relative to the breed base.
7. CDCB Predicted Transmitting Ability (traditional or genomic) for milk, fat and protein, Net Merit indexes (Cheese Merit dollars, CM$; Net Merit dollars, NM$; Fluid Merit dollars, FM$; Grazing Merit dollars, GM$), plus Productive Life (PL) and Livability (LIV), fertility traits (Daughter Pregnancy Rate, DPR; Cow Conception Rate, CCR; Heifer Conception Rate, HCR), Somatic Cell Score (SCS), and health traits and index (Milk Fever, MFV; Displaced Abomsum, DAB; Ketosis, KET; Mastitis, MAS; Metritis, MET; Retained Placenta, RPL; Health Trait Index, HTI).
   The evaluation issue date and number of records (females) or daughters (bulls) are given, with the Reliability (%R) of the evaluation. Percentile (%ILE) indicates the animal's ranking relative to all others of its sex. PTAs can be compared to indicate which animal will, on the average, transmit higher production to offspring. The difference in PTAs between any two bulls is the amount their future daughters will differ in performance when matings are to dams of equal genetic merit.
   AJCA Predicted Transmitting Ability for Type (PTAT/GPTAT), Jersey Udder Index (JUI/GJUI) and Jersey Performance Index™ (JPI/GJPI) with the date of the evaluation.
   Jersey Performance Index_{2020}™ ranks animals by combined genetic merit for 18 traits *(with weights):* 27% Protein; 19% Fat; 3% Milk Density; 19.4% Functional Trait Index (subsets are 9.2% Jersey Udder Index™, 0.2% Feet and Legs and 10% Body); 14.5% Fertility (9% DPR, 3.5% CCR and 2% HCR); 8% Survival (5% PL and 3% LIV); 4.5% SCS; and Jersey Health Traits at 4.6% (MFV 1.0%; DAB 1.0%; KET 0.4%; MAS 1.9%; MET 0.2% and RPL 0.1.%). PTAT/GPTAT is the genetic evaluation for final score–type. PTAs/GPTAs for type appraisal breakdown traits are printed.
   Genotyped animals are evaluated on a separate single (S) breed basis or on a multiple (M) breed blended basis depending on their genetic make-up. S designations are for BBR ≥ 90 and M is a result of BBR < 90.
   For young animals without their own performance information or that have not been genomically tested, PA is calculated for milk, fat, protein, Net Merit indexes, type, and JPI. PA is the sum of 1/2 the sire's PTA and 1/2 the dam's PTA. PA estimates are also printed for appraisal breakdown traits. Reliability (%R) for these estimates is also printed.
8. Lactation records. Up to 16 records are printed, listing information in this order: age at calving, days milked, times milked per day, actual pounds milk, percent fat, actual pounds fat, percent protein, actual pounds protein, and data collection rating (DCR). If a verification test was conducted during the lactation, a V is printed. The 305-day, 2x, mature equivalent lactation average for records at least 180 days in length is also printed.
9. Type evaluations, the cow's age and final score. Final scores are: Excellent (90 and above); Very Good (80-89 inclusive); Desirable (70-79); Acceptable (60-69); and Poor (50-59). Scores for breakdown traits from the most recent appraisal are listed: ST, stature; SR, strength; DF, dairy form; RA, rump angle; RW, rump width; RL, rear leg set; FA, foot angle; FU, fore udder; RH, rear udder height; RUW, rear udder width; UC, udder cleft; UD, udder depth; TP, teat placement; TL, teat length; RTR, Rear Teat Placement-Rear View; RTS, Rear Teat Placement-Side View.
10. The sire of the animal, his registration number, and when applicable, genotype, JH1 and JNS status, sire program and NAAB code. The CDCB genetic evaluations for production, fitness and health traits and AJCA genetic evaluations for type are listed, with evaluation date.
11. The dam, her registration number, genotype status and haplotype test status (when applicable), permanent ID, up to 12 lactation records, production summary, and genetic evaluations are given.
12. Age and final score, with type breakdowns for last evaluation.
13. The Recorded Owner, as indicated on the records of the AJCA.
14. The Breeder of the animal, defined as the Recorded Owner of the dam at conception of animal.
15. *Females only:* Total of registered progeny, followed by registration number, sex, tattoo and genotype status (if applicable), and JPI/GJPI for the eight youngest progeny, listed in reverse birth order.
16. The paternal and maternal grandsires *(refer to 10)*.
17. The paternal grandam *(refer to 11)*, latest final score and up to four lactations. Cows with AJCA registration numbers below 2,300,000 or registered in other countries may not have this information.
18. The maternal grandam *(refer to 11)*, up to four lactations, along with type evaluations are printed.

Rev. 8/23

Jersey Neuropathy with Splayed Forelimbs (JNS)

Description of Condition and Requirements for Designation

With excerpts from Policies Regarding Undesirable Genetic Factors, published at http://www.usjersey.com/Reference/Policies_Undesirable_Genetic_Factors_rev711.pdf

Effective February 22, 1983
Revised November 6, 2020

Statement of Policy

Every effort should be made within the breed to identify those animals that carry undesirable genetic factors. The American Jersey Cattle Association considers it the responsibility and obligation of each member of the Association and each breeder of Jersey cattle to report to the Executive Secretary any known case of an abnormal Jersey animal. The Executive Secretary shall maintain records of abnormalities and shall make available information from such records in accordance with rules established by the Board of Directors from time to time.

The Board of Directors considers it to be unethical practice to offer for sale an animal, male or female, an embryo or semen from an animal that has been designated a carrier of an undesirable genetic factor without first informing the prospective buyer of this fact. In practice this means that any advertising, descriptive material, or pedigree containing a designated carrier of an undesirable genetic factor shall carry a statement indicating designated carriers.

This statement of policy is made in belief that it is in the best interests of the breed and the breeders of Jersey cattle. It is made in the belief that it will serve the position of those who have taken the more difficult, positive, open approach to this fundamental concept of ethics in the improved breeding of dairy cattle. In the long run, all serve to gain by such a policy, but only to the degree that all cooperate in the acceptance and enforcement of this policy.

Jersey Neuropathy with Splayed Forelimbs (JNS)
Statement of Designation Procedures
Designated November 2020
Description of Condition

Calves affected with Jersey Neuropathy with Splayed Forelimbs (JNS) are unable to stand and exhibit significant extensor rigidity of forelimbs and/or excessive lateral abduction. Affected calves are generally bright at birth but exhibit neurologic symptoms including spasticity of head and neck and convulsive behavior. Other symptoms reported include dislocated shoulders, congenital craniofacial anomalies and degenerative myelopathy.

JNS is attributable to a specific haplotype on Bos taurus autosome 6 (BTA6). Subsequent investigation identified the biological cause within the haplotype as a UCLH1 missense variant located at 60,158,901.

Requirements for Designation of JNS Carrier or Tested Free Status

The Board of Directors will not designate an animal either a carrier or free of JNS haplotype if the Board considers that there is a reasonable doubt that the animal is a carrier. The determination as to reasonable doubt depends upon the quality and amount of available evidence which will vary in each case.

Official JNS status is obtained (1) by direct observation of the UCLH1 missense variant on BTA6 in the genotype of an animal, or (2) by direct observation of the haplotype including the UCLH1 missense variant on BTA6 in the genotype of an animal, or (3) by use of genomic test results of family members to determine through imputation, if the variant is contained in the JNS haplotype of other genotyped animals, and reassessed as additional information is obtained from genomic analyses.

With respect to all sales sponsored by the Association, a bull shall not be accepted unless designated free of Jersey Neuropathy with Splayed Forelimbs (JNS).

Identification of Undesirable Genetic Factors

In determining what genetic factors are considered to be undesirable in the Jersey breed, the Board of Directors shall consider such evidence as it considers appropriate. The Executive Secretary shall make such investigations of genetic factors occurring in Jersey animals as he or she may believe necessary or advisable and shall report the results of his or her investigations to the Board of Directors. Before recommending that the Board make a determination regarding the existence of an undesirable genetic factor, the Executive Secretary shall consult with at least two experts whose recommendations shall be submitted to the Board.

Identification of Carrier Animals

When the Board of Directors shall determine that an undesirable genetic factor exists in the Jersey breed, the Board shall take whatever action it may consider appropriate to control and limit the genetic factor. Such action will include procedures to identify animals that are probable carriers of the undesirable genetic factor and to inform persons having an interest in the Jersey breed of the identity of such probable carriers. The procedures for publication of the identity of probable carrier animals, referred to as "designated" carriers, are contained in supplemental statements adopted with respect to each undesirable genetic condition.

For each undesirable genetic condition the Board of Directors shall adopt a separate statement of procedures for designating animals, referred to as "Statement of Designation Procedures," and designate an official report form to be used for reporting affected animals. The Board of Directors shall be responsible for designating animals as carriers of an undesirable genetic factor. When an animal has been designated as a carrier, the Executive Secretary shall notify the last recorded owner, the breeder, any lessee, and any third-party nominator by regular U.S. Mail.

The Board of Directors may adopt procedures and rules by which a Jersey may be progeny tested for a particular undesirable genetic factor. The rules and procedures for progeny testing are contained in supplemental statements adopted with respect to each undesirable genetic condition.

The policy of the Association is to identify and designate Jersey animals as carriers of undesirable genetic factors when (1) genomic detection based on DNA analyses and/or (2) documentation of their own progeny is sufficient to accomplish designation.

Publication and Release of Information

Male and Female Animals

The Executive Secretary shall maintain a record of all animals that have been designated carriers of an undesirable genetic factor, and designation shall be noted on all advertising, descriptive material, or pedigrees published by the Association containing reference to a designated carrier. The Association shall also notify the recorded owner, the breeder, any lessee, and any third-party nominator if the animal carries an undesirable genetic factor.

Except as provided in this statement of policies, no information concerning the genetic condition of any animal shall be released by the Association without approval of the Board of Directors.

Sales

For each undesirable genetic condition the Board of Directors shall establish policies for the marketing of carrier animals and their progeny in all sales sponsored or managed by the Association or Jersey Marketing Service.

Frequently Asked Questions: Jersey Neuropathy with Splayed Forelimbs (JNS)

What is Jersey Neuropathy with Splayed Forelimbs (JNS)?

JNS is a recessive genetic condition which, when inherited from both parents, results in an affected calf that is unable to stand. Front legs are splayed and rigid. Affected calves are generally bright at birth but exhibit neurologic symptoms including spasticity of head and neck and convulsive behavior. Other symptoms reported include dislocated shoulders, congenital craniofacial anomalies and degenerative myelopathy. JNS is attributable to a specific haplotype on Bos taurus autosome 6 (BTA6). Subsequent investigation identified the biological cause within the haplotype as a UCLH1 missense variant located at 60,158,901.

What is a haplotype? ls a haplotype different from a gene?

A haplotype is a region of closely linked genetic markers (single nucleotide polymorphisms, or SNPs) that are located on one chromosome and that are inherited as a group. As such, a haplotype encompasses multiple genes. There are many haplotypes, most of them good or benign, but a few of them not so good.

Is Jersey Neuropathy with Splayed Forelimbs (JNS) the same genetic condition as Limber Legs (LL)?

No, for several reasons. The symptoms and pathology for affected JNS calves are not the same as with affected LL calves. The genotypes of known Limber Legs (LL) carriers do not include the same haplotype or causative variant attributed to JNS. The genetic variants for LL and JNS are located on 2 different chromosomes.

Why did the Board of Directors designate Jersey Neuropathy with Splayed Forelimbs (JNS) as an undesirable genetic factor?

Healthy calves are the basis for Jersey breed growth, and a key to the profitability of your Jersey business. By designating JNS as an undesirable genetic factor, information will be available to all Jersey owners so they can limit carrier to carrier matings and manage the impact of potential calf loss.

What is the frequency of JNS in the Jersey population?

Current carrier frequency is 5.92% in the genotyped Jersey population. That means that approximately 6% of the genotyped Jersey population is a Carrier of one copy of the JNS haplotype (JNSC) and 94% are Free of JNS haplotype (JNSF).

What is the basis for designating JNS status?

JNS status is determined by identification of the haplotype from a 6K or higher genotype. A direct test will be included in future genomic test chips.

How will this information be published?

Status of an animal is listed as JNSF designating status Free, JNSC designating status Carrier. When an animal is tested as a carrier, the recorded owner, the breeder, any lessee, and any third party nominator will be notified by the AJCA. The association maintains a record of all animals that have been designated carriers, and such designation shall be noted on all advertising, descriptive materials, or pedigrees published by the AJCA. This includes Genomic Evaluation Reports, Official Performance Pedigrees, Performance Progeny Reports and genetic evaluation reports.

What can I expect if I mate two known carriers of JNS?

As shown below, there is a 25% chance that the calf would inherit two copies of JNS and be born with the affected condition.

The chance that the calf would be a carrier is 50%. But there's also a 25% probability that this mating would result in a calf that does not inherit JNS from either parent.

Outcomes from Mating Carriers of JNS

25% are Normal Non-Carriers, 50% are JNS Carriers, 25% are Affected with JNS

JNSIC FEMALE JNSC MALE	NORMAL (N)	JNS
NORMAL (N)	N-N *Normal Non-Carrier*	M-JNS *Hetrozygous Carrier*
JNS	*JNS-N Heterozygous Carrier*	*JNS-JNS Affected Calf*

What about matings of a carrier bull to non-carrier females?

Half of the offspring (50%) would be JNS carriers, and the other half would be normal.

Outcomes from Mating JNS Carrier to Non-Carrier JNS

50% are Normal Non-Carriers, 50% are JNS Carriers

JNSIC FEMALE JNSC MALE	NORMAL (N)	NORMAL (N)
NORMAL (N)	N-N *Normal Non-Carrier*	N-N *Normal Non-Carrier*
JNS	*JNS-N Heterozygous Carrier*	*JNS-N Heterozygous Carrier*

How will JerseyMate handle JNS?

1. JerseyMate eliminates matings of designated JNS carrier bulls to designated JNS carrier females.
2. JerseyMate discounts potential matings by accounting for the probability of a lost calf when two copies of the JNS haplotype are inherited. The economic impact of a lost calf is estimated to be $150.

Herd Register or Generation Count 4-6 and BBR 100: Code A and F Bulls - Pedigree and EFI/GFI
December 2023

This report lists all Code A & F bulls marketed in the U.S. ranked by Jersey Performance Index (JPI), with their NAAB Code and Short Name, plus sire and maternal grandsire. At the far right is the bull's Expected Future Inbreeding (EFI) estimate or, if he is genomically tested, the genomic estimate of future inbreeding (GFI). EFI/GFI have nearly the same interpretation and provide Jersey breeders an important tool for managing inbreeding levels.

The USDA-Animal Improvement Programs Laboratory calculates the EFI of future progeny based on a random sample of 1,000 potential mates born in the last five (5) years obtained from the AJCA database. Genotypes allow measuring actual homozygosity and percentages of genes in common instead of the expected fractions computed from pedigrees. For GFI, the reference population is all genotyped animals born in the last 10 years.

Section B

Consolidated Reports and Lists: Bulls Marketed in the U.S.

December 2023

Sire Conception Rate: All Bulls Listed in NAAB Stud Code Order

Sire Conception Rate (SCR) is a national measure of A.I. bull fertility. For an evaluation to be publishable, a Jersey bull must have an A.I. status other than inactive and cannot be more than 13 years old. Bulls must also have at least 200 services in the last four years, 100 breedings in the most recent 12 months, and have been used in at least 10 herds.

SCR is expressed as the bull's difference from the average of evaluated bulls, which is set at 0.0 for each evaluation. For example, a bull with an SCR of 5.0 produced a conception rate 5.0% above average.

Bulls are listed in NAAB Code order and sorted within A.I. marketing organizations. Status codes are: A, Active A.I.; C, semen collected; F, foreign-sampled, semen available; G, genomically tested and marketed bull; I, inactive A.I.; L, limited use; N, non-A.I.; and P, multiherd sampled.

December 2023, Young Sires with NAAB Stud Codes

This report lists all bulls, regardless of registry status, born since June 1, 2021 and assigned stud codes by the National Association of Animal Breeders. Bulls assigned marketing code G are not listed (refer to separate report in Section II). Bull short names, sires and maternal grandsires are listed. Genotype status is indicated by genotype chip density printed to the right of the AJCA Registration Number. Genomic PTAs for Jersey Performance Index™, milk, fat, protein, Somatic Cell Score, Productive Life, Daughter Pregnancy Rate, Net Merit dollars, Jersey Udder Index™ and Expected Future Inbreeding (GFI) are listed.

REAP Herds Ranked By JPI

December 2023

REAP Herds Ranked by Average Jersey Performance Index™ (JPI)

The top 25% of herds ranked by average Jersey Performance Index™ are listed. Herds must be enrolled in the AJCA REAP program and have a minimum of 10 cows with JPIs. The average includes only Herd Register and Generation Count 4, 5 and 6 cows that have calved within the past 15 months with no termination code associated with the current lactation. Herds with same JPI average are ranked by the average for PTA protein.
