Information Presented on AJCA Performance Pedigrees

1. Animal sex, DHI herd number (cows only), AJCA registration name and registration number.

   If the animal has registry status other than Herd Register, a prefix is added to the name. For the Genetic Recovery program, these are: OA, first step; PR, second step; and GR, third step. For the Jersey Expansion program, J1 indicates first-generation crossbred, provided the animal has an Jersey HR (no prefix) sire or dam. The prefix UR designates an animal with permanent identification recorded by the AJCA, but that does not meet requirements for HR, GR, PR, OA or J1 status. Request details on AJCA animal recording systems from Herd Services.

   Twins are labeled. Name suffixes include P (polled); PP (tested homozygous polled); ET (embryo transfer); ETS (split embryo); ETN (nuclear transfer, cloning); LL (designated carrier of genetic abnormality Limber Legs); RVC (designated carrier of genetic abnormality Rectovaginal Constriction); PTL (progeny tested for LL); and PTR (progeny tested for RVC).

   GT to the right of the registration number indicates that an animal has been genotyped. Source of genomic information is identified for females as follows: GT3K, from 3K chip; GT6K, from 6K chip; GT8K, from GGP 8K chip; GT50K, from 50K chip; GT80K, from 80K chip; HD, from 770K chip; GI, genotype through imputation from progeny, but not genotyped; and GA, includes genomic information from genotyped ancestors, but not genotyped.

   Official status for Jersey Haplotype 1 based on a genotype of 6K or higher density is given: JH1C for carrier, JH1F for tested free.

   Bulls enrolled in the Young Sire Program or Genetic Diversity Program are marked YSP or GDP, respectively. Unproven bulls eligible for, but not enrolled in these programs are designated GQ (qualified for YSP), DQ (qualified for GDP), or DGQ (qualified for both programs).
2. The date of birth (month, day, year) and, for cows, the DHI processing center control number (CONTROL #).
3. Permanent identification of the animal, labeled by form (either tattoo *or* American ID eartag, or tattoo *and* American ID eartag). Numerical ID is listed first for the right ear, followed by a slash then the numerical ID in the animal's left ear.

   For heifers, the percentile (P-level) of the Parent Average (PA) for Jersey Performance Index™ (JPI) is printed. If PA JPI is not available, the P-level is based upon PA for protein. The P-level indicates how this individual ranks compared to other heifers born in the same year. Note: Heifers with genomic evaluations will also have a percentile (%ILE) ranking.
4. Expected Future Inbreeding (EFI), or if animal is genotyped, GFI. EFI/GFI estimates future progeny inbreeding, assuming that an animal is mated randomly to the current population.
5. Predicted Producing Ability (PPA) and Yield Deviation (YD) for milk, fat and protein. PPA predicts future production. Because PPA is determined relative to a constant genetic base, it can be used to compare one herd situation and is the most effective tool to identify cows that will be profitable milk producers. YD is the weighted average of lactation yield minus selected management and environmental factors, expressed relative to the breed base.
6. USDA Predicted Transmitting Ability (traditional PTA or genomic GPTA) for included traits, USDA Net Merit indexes, Productive Life (PL), Pregnancy Rate (DPR), and Somatic Cell Score (SCS).

   These are estimates of genetic merit that will be transmitted to offspring. Reliability (%R) is a measure of the accuracy of the evaluations. The percentile (%ILE) indicates the animal's ranking relative to all others of its sex. PTAs can be compared to indicate which animal will, on the average, transmit higher production to offspring. PL is the genetic evaluation of milk-producing lifetime. DPR is the genetic evaluation of cow fertility, and SCS of mastitis resistance. PTAT/GPTAT is the genetic evaluation for final score relative to breed base.

   AJCA Predicted Transmitting Ability for Type (PTAT/GPTAT) and Jersey Performance Index™ (JPI) with the date of the evaluation.

   The breed-specific Jersey Performance Index™ *(2010 update)* combines PTA/GPTA for Protein, Fat, Functional Trait Index (FTI), PL, DPR, and SCS, with relative weights of 42% Protein : 15% Fat : 15% FTI : 12% PL : 10% DPR : 6% SCS. JPI can be used to rank animals for combined genetic merit (production, type, and fitness traits). PTAs/GPTAs for appraisal breakdown traits are printed on the following lines.

   For young animals without their own performance information or that have not been genomically tested, Parent Average (PA) is calculated for milk, fat, protein, Cheese Merit dollars (CM$), Net Merit dollars (NM$), Fluid Merit dollars (FM$), type, and JPI. PA is the sum of 1/2 the sire's PTA and 1/2 the dam's PTA. PA estimates are also printed for appraisal breakdown traits. When genotyped, Parent Average is replaced by genomic PTA (GPTA). Reliability (%R) for these estimates is also printed.
7. Lactation records. Up to 16 records are printed, listing information in this order: age at calving, days milked, times milked per day, actual pounds milk, percent fat, actual pounds fat, percent protein, actual pounds protein, and data collection rating (DCR). If a verification test was conducted during the course of a lactation, a V is printed. The 305-day, 2x, mature equivalent lactation average for records at least 180 days in length is also printed.
8. Type evaluations, the cow's age and final score. Final scores are on a 50 to 99 scale: Excellent (90 and above); Very Good (80-89 inclusive); Desirable (70-79); Acceptable (60-69); and Poor (50-59). Scores for breakdown traits from the most recent appraisal are listed: ST, stature; SR, strength; DF, dairy form; RA, rump angle; RW, rump width; RL, rear leg set; FA, foot angle; FU, fore udder; RH, rear udder height; RUW, rear udder width; UC, udder cleft; UD, udder depth; TP, teat placement; TL, teat length.
9. The sire of the animal, his registration number, genotype status (if applicable), sire program (if applicable) and NAAB code (if assigned). The USDA Sire Summary (PTA or GPTA) with issue date for milk, fat, protein, CM$, NM$ and FM$; fitness traits (PL, DPR and SCS); and the AJCA Sire Summary for type with issue date are given. The difference in PTAs between any two bulls is the amount their future daughters will differ in performance when matings are to dams of equal genetic merit.
10. The dam. Her registration number, genotype status (when applicable), tattoo, lactation records, production summary, and genetic evaluations are given. Up to 12 lactations are printed.
11. Age and final score, with type breakdowns for last evaluation.
12. The date that the pedigree was compiled and printed.
13. The Recorded Owner, as indicated on the records of the AJCA.
14. The Breeder of the animal (Recorded Owner of the dam at conception of animal).
15. Total of registered progeny, followed by registration number, sex, tattoo and genotype status (if applicable) for the eight youngest progeny, listed in reverse birth order.
16. The paternal grandsire (refer to 9).
17. The paternal grandam (refer to 10). Up to four lactations are printed. Cows with AJCA registration numbers below 2,300,000 or cows registered in other countries may not have lactations printed. Only the latest final score is given.
18. The maternal grandsire (refer to 9).
19. The maternal grandam (refer to 10). Up to 4 lactations, along with type evaluations (refer to 8) are printed.
