

The P-level may be the most important guide on the pedigree when evaluating Jersey heifers' genetic merit. The P-level is a percentile ranking of the Parent Average (PA) Jersey Production Index™ (JPI), displayed as P0 through P9. When PA JPI is not available, percentile rankings are based on PA Protein.

The P-level indicates how one heifer ranks compared to all other Registered Jersey™ heifers born in the same year. To interpret, insert the P-level in the blank in the following statement: "This heifer has a higher PA JPI than \_\_\_0 percent of the registered Jersey heifers born in the same year." Example: A P8 heifer born in 2014 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2014.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2011 to 2015 and projected for 2016 and 2016; and also for PA Protein for 2011 to 2015, with projections for 2016 and 2016.
