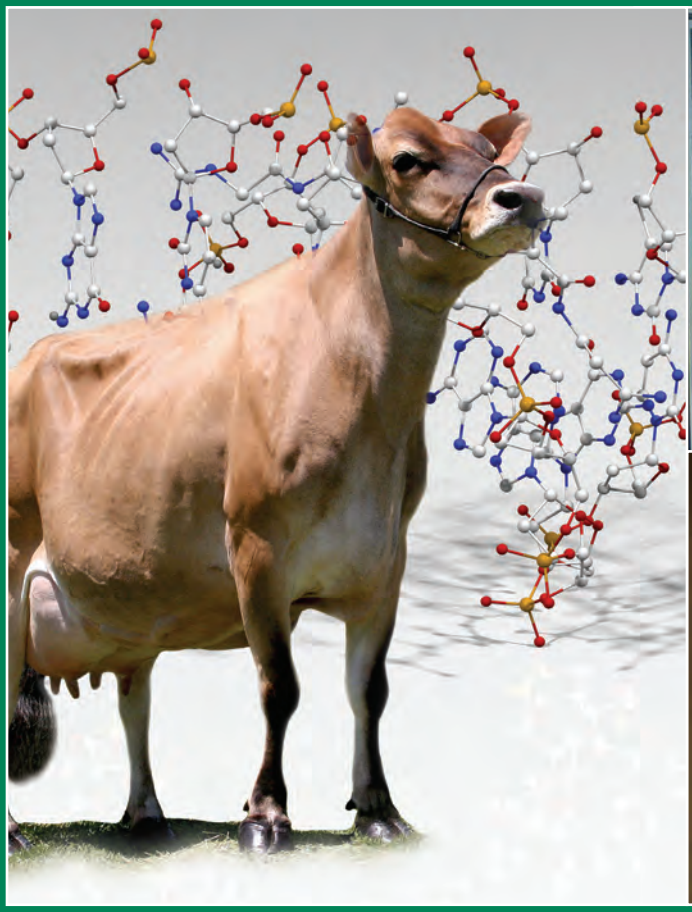
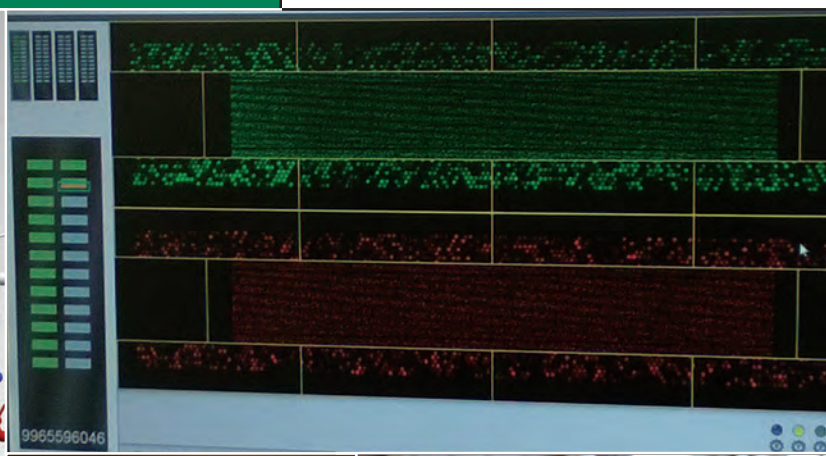
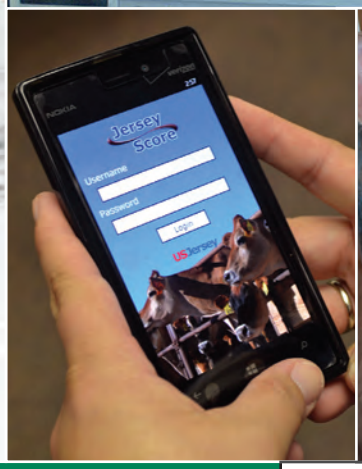
AMERICAN JERSEY CATTLE ASSOCIATION

JERSEY GENETIC SUMMARY







USJersey

Jersey Expansion Program Restructured, Genetic Recovery Enhanced By More Information

At its March, 2015 meeting, the AJCA Board of Directors acted to change rules for two of the Association's animal recording services:

(1) the Jersey Expansion program, identifying animals with both Jersey and other-breed genetics in their pedigrees, and
(2) the Genetic Recovery program for unregistered, purebred animals exhibiting Jersey characteristics.

Genetic Recovery was created by the Association in 1975 to record unregistered but purebred Jersey females and, owing to its success, has been adopted by other dairy cattle associations across the world. Jersey Expansion was implemented in 1999 to identify animals with both Jersey and other-breed genetics in their pedigrees, allowing offspring of first-generation females sired by Registered Jersey™ bulls to be recorded through Genetic Recovery.

Action on Jersey Expansion. Jersey Expansion was separated from the Genetic Recovery program retroactive to program implementation January 1, 1999. It was restructured to provide accurate identification for breed of origin across multiple generations and define a clear pathway for animals to be recorded in the AJCA Herd Register. Under revised rules for Jersey Expansion, six continuous generations sired by Registered Jersey™ bulls starting with the first-generation female (J1) will result in an animal eligible for the AJCA Herd Register *(see table)*.

Steps in Jersey Expansion Program, Effective January 1, 1999

Prefix	Pedigree *(JE designates AJCA Herd Register status)*	Pedigree Inheritance from Jersey	Other Breed
J1	JE x Other Breed	50.0%	50.0%
J2	JE x (JE x Other)	75.0	25.0
J3	JE x [JE x (JE x Other)]	87.5	12.5
J4	JE x [JE x JE x (JE x Other)]	93.75	6.25
J5	JE x [JE x JE x JE x (JE x Other)]	96.88	3.12
J6	JE x [JE x JE x JE x JE x (JE x Other)]	98.44	1.56
HR	JE x [JE x JE x JE x JE x JE x (JE x Other)]	99.22	0.78

Females will be recorded at all levels (J1 through J6). Males are only eligible at the J4, J5 and J6 levels, and only when the bull and both parents are genotyped. Offspring status will advance one level (a) when sired by a bull recorded in the AJCA Herd Register *(HR status, no prefix)* or (b) when one parent is three or more generations higher than another. For all other pedigree combinations, offspring status will be no higher than that of the lowest status parent. AJCA Herd Register status is achieved by offspring of J6 and HR parents. The descendants of J1 females now recorded by the AJCA will be assigned a new prefix according to their status in this recording system and replacement certificates issued to owners.

Action on Genetic Recovery. Modifications to the Genetic Recovery program, effective March 14, 2015, now require an Original Animal (OA prefix) to have a Herd Register status parent *(sire or dam)* or else be qualified by genotyping. The lowest step at which a bull will be recorded will be at the third step, GR, provided the bull and both parents are genotyped. "Genetic Recovery continues to serve the original intent of bringing purebred but grade Jerseys into the AJCA database," commented AJCA President Chris Sorenson. "The changes made by the Board of Directors make it even stronger by adding another level of pedigree information or applying genomic testing tools. The result will be more complete pedigrees earlier and more accurate genetic evaluations."

Action on "Gratitude" Descendants. The Board revisited decisions made in 2010 regarding the registration of OA Oomsdale Gordo Goldie Gratitude 111224922. A numeric code in brackets is now part of the registration name for this cow and all descendants, with "Gratitude" labeled {1}, her progeny {2}, and continuing through six generations. "This Board action gives Jersey owners the additional information they requested about extended members of this family," explained Sorenson.

This evaluation release also implements the "Gold Book" for females and new presentation of reports.

Because of the changes in AJCA animal recording programs and at the direction of the AJCA Board of Directors, many reports from the CDCB genetic evaluations have been divided by registry status: (a) Herd Register *(HR, no prefix),* and (b) Genetic Recovery *(GR, PR and OA females, and eligible males)* and Jersey Expansion *(J1 through J6 for females, and eligible males)*. The "All Summarized Bulls" report remains a consolidated list sorted alphabetically by the first letter of the registration name, excluding any prefix. This also applies to a variety of reference and locator lists. The "Top 10 Bulls by Category" report is based upon all A.I. *(code A)* and foreign *(code F)* bulls marketed in the U.S., regardless of registry status.

To accommodate this increase in information, only bull reports will be included in the "Green Book" and a "Gold Book" has been added for females. The cutoff for the female Genetic Recovery-Jersey Expansion lists is determined by the lowest qualifying Jersey Performance Index™ (JPI) or the maximum number of females included on the HR list, whichever is less.

The *Jersey Genetic Summary* with monthly genomic updates is available 24/7 online at http://greenbook.usjersey.com.

JERSEY GENETIC SUMMARY

April 2015 Green Book Online at http://greenbook.usjersey.com Volume 20, Number 1

Heifer Conception Rate	0.01

[1] *Proportion of observed differences in a trait between individuals attributed to transmittable genetic factors, rather than environmental factors*

Glossary of Terms

Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), Heifer Conception Rate (HCR): Genetic evaluations of fertility. DPR measures the percentage of non-pregnant cows that become pregnant during each 21-day interval where 1% in PTA DPR equals 4 fewer days open. HCR and CCR measure the percentage of inseminated heifers or cows that become pregnant at each service where 1% in PTA means more likely to become pregnant during that estrus cycle compared with an evaluation of 0.

Expected Future Inbreeding (EFI): Estimate of future progeny inbreeding, assuming that an animal is mated randomly.

Genomic "G" Codes: GT, animal has been genotyped using one of a variety of offered chip densities (e.g., GT13K with 13K chip); GI for genotype through imputation from progeny, but not genotyped; and GA, inclusion of information from genotyped ancestors.

Genomic Future Inbreeding (GFI): Estimate of inbreeding in future offspring, based on parent's actual homozygosity and percentages of genes in common with the genotyped breed population.

Genomic Predicted Transmitting Ability (GPTA): Estimate of genetic merit for indicated trait calculated from (1) information from genotypes or imputed genotypes of ancestors DNA analysis of functional genes inherited by a particular animal; plus (2) individual performance and (3) pedigree information.

Jersey Performance Index™ (JPI): Combines PTA or GPTA Protein, Fat, Functional Trait Index (FTI), PL, SCS and three fertility traits (DPR, CCR, HCR) with the emphasis of 43% P : 15% F : 15% FTI : 10% PL : 6% SCS : 7% DPR : 2% CCR : 2% HCR. Ranks animals for combined genetic merit for production, type and fitness traits.

Jersey Udder Index™ (JUI): Based on the Functional Trait Index (FTI) weightings for udder traits *(refer to formula, page 6).*

Net Merit dollars (NM$, also CM$, FM$ and GM$): Expected lifetime profit as compared with the breed base cows born in 2010, for four production/economic conditions. Described at http://aipl.arsusda.gov/reference/nmcalc-2014.htm.

Parent Average: Estimate of an individual's eventual PTA based on the average of the parents' traditional PTAs.

Percentile: A ranking relative to the population. For example, a bull with a 90 percentile ranking or a heifer that is a P9 is ranked higher than 90 percent of the population.

Predicted Transmitting Ability (PTA): The best predictor of genetic merit; specifically what a bull or cow is expected to transmit for a particular trait to their offspring. *See also GPTA (above).*

Productive Life (PL): Time in the milking herd before removal by voluntary culling, involuntary culling, or death.

Sire Conception Rate (SCR): Phenotypic predictor of bull fertility, expressed as a relative conception rate, measured for the first seven (7) breedings of the cow (no heifer breedings).

Somatic Cell Score (SCS): Indicator trait for mastitis resistance based on the direct measure of somatic cells in milk samples.

2015 Jersey Performance Index™ (JPI)

Calling Jersey Performance Index™ "a strategy for breed improvement," the AJCA Board of Directors authorized updates including adjusted trait weights and the addition of new traits for implementation with the December 2014 genetic evaluations.

The objective of Jersey Performance Index™ is to increase lifetime net income. The 2015 version of JPI was developed from the most extensive evaluation of production, longevity and health data ever undertaken for a JPI™ update, conducted by geneticist Kent Weigel of the University of Wisconsin–Madison.

In JPI_{2015}, 58% of the index's value is placed on production traits (PTA protein and PTA fat). The remaining 42% is contributed by six health, fitness and longevity traits: the Functional Trait Index (FTI), and USDA PTAs for Productive Life (PL), Somatic Cell Score (SCS), and three fertility traits: Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), and Heifer Conception Rate, HCR).

Calculation of the Jersey Performance Index™

Beginning with December 2014 genetic evaluations, JPI™ is calculated as follows:

JPI_{2015} = (43 x PTA protein / SD) + (15 x PTA fat / SD)
+ (10 x PTA Productive Life / SD) + [6 x (3 - PTA Somatic Cell Score) / SD)]
+ (7 x PTA Daughter Pregnancy Rate / SD) + (2 x PTA Cow Conception Rate / SD)
+ (2 x PTA Heifer Conception Rate / SD) + Functional Trait $Index_{2015}$

where Functional Trait Index equals the PTAs of linear type traits weighted by their relative economic contribution to JPI_{2015} (see Table 2).

Traits and their relative weights in JPI_{2015}, with changes from the previous version noted in parentheses, are 43% PTA protein *(+1%)*; 15% PTA fat *(no change)*; 15% Functional Trait Index *(no change)*; 10% Productive Life *(-2%)*; 6% Somatic Cell Score *(no change)*; and 7% Daughter Pregnancy Rate *(-3%)*, plus 2% Cow Conception Rate *(new)* and 2% Heifer Conception Rate *(new) (see also Table 1)*.

While most traits of the JPI™ index have trended in desired directions since the previous update in 2010, fertility traits have not been improving, leading to the decision to increase selection pressure by adding the cow and heifer conception traits. Also, because the demand for and value of protein continues to grow in domestic and international milk markets, the slight shift of 43% protein to 15% fat puts additional selection pressure on protein yield.

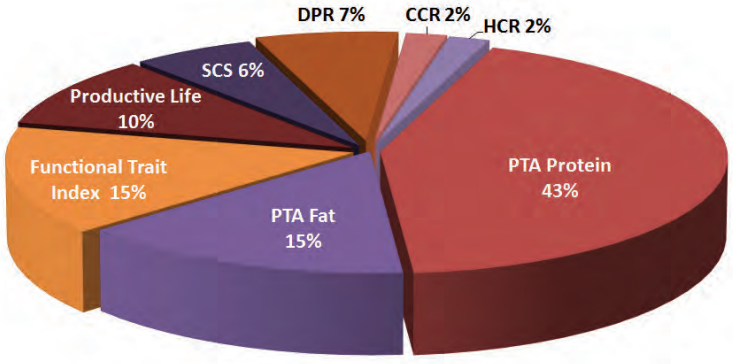
Regrouping by functional categories, production receives 58% of the emphasis in the new formula. Udder health at 20% is a combination of direct selection for lower Somatic Cell Score (especially important to capture quality premiums), plus udder traits included in the Functional Trait Index (FTI). There is 11% on herd life, through PTA Productive Life plus the body and feet traits in FTI. Lastly, 11% is placed on fertility.

"Selection for an index of economically important traits is the optimal way to achieve breed improvement," Dr. Weigel observed, "however, the index must be updated periodically to ensure that it reflects current economic conditions on the farm, as well as current strengths and weaknesses of the breed.

"The 2015 revision focused on prediction of lifetime net profit from production, type, health, longevity, and fertility traits that are available early in life, with an emphasis on using the most recent cow population possible and achieving a balance between timely input prices and stability of these prices over time."

Method Used For 2015 Updates

Unlike previous updates, which included only cows with completed productive life, Weigel also analyzed cows from the current population. Records from 328,312 Jersey cows with first calving from January 1, 2001 through December 31, 2012 were provided through the cooperation of the dairy records processing centers (DRPCs).



A total of 264,681 cows had left the herd at the time of analysis, and their lifetime profit records were considered as complete. An additional 63,631 cows were still in the herd, and their records were considered as in-progress, such that their profit totals to date were compared with those of contemporary cows in the same year of first calving. Up to nine lactations per cow were used, and lifetime profit records for cows that remained in the herd after nine lactations were treated as in-progress.

Income sources considered were from protein, fat and total

(continued on next page)

Table 1. History of Traits and Weights (%) Used to Calculate PTI (1998) and Jersey Performance Index™.

Year	Protein	Fat	FTI	PL	SCS	FUI	DPR	CCR	HCR
1998	55.5	22.2	16.7		5.6				
2002	50.0	20.0	15.0	5.0	5.0	5.0			
2005	50.0	20.0	15.0	3.75	3.75	3.75	3.75

FTI Updates, Presentation of Jersey Udder Index

Of the eight components of JPI™, only one—the AJCA Functional Trait Index—captures the effects of type traits *within* production on lifetime profitability. It assesses how functional type traits are important to the Jersey cow's economic survival. As such, it pinpoints where improvement is needed and needed most, and where opportunities for further gains are possible.

A new approach was used by Dr. Weigel to delineate the direct contribution of each type trait within the Functional Trait Index to Jersey Performance Index™. In the geneticist's words, the relationships are now "transparent."

Table 2 shows that what will make the most difference in improving Jersey profitability going forward is increasing selection pressure on udder traits. But as always, some traits are more important than others, a fact clearly depicted in the updated Jersey Udder Index™, which is derived from FTI. Udder Depth is the most important, followed by three traits (Fore Udder Attachment, Udder Cleft and Rear Udder Height) that have similar influence on cow survival and lifetime net income.

Jersey Udder Index™ was previously reported in PTA form. Now the JUI number is simply how many points udder traits add (or subtract) from Jersey Performance Index™. In short, JUI's meaning is linked directly to an animal's JPI.

To illustrate, A, F and G code bulls in the December 2014 evaluation averaged 10.6 for JUI. The JPI average was 121. So for the hypothetical average Jersey bull at JPI 121, 10.6 of those points are from JUI. Think of them as JPI udder points.

Fertility Traits

Direct selection for fertility was added to JPI™ in 2005 and has seen increasing emphasis with each subsequent update. In addition to Daughter Pregnancy Rate (DPR), JPI$_{2015}$ includes two new fertility measures, bringing total emphasis to 11% in the index.

The first, Cow Conception Rate (2%), measures the lactating cow's ability to conceive defined as percentage of inseminated cows that become pregnant at each service. A CCR of 1 implies that daughters of this bull (or cow) are 1% more likely to become pregnant during that lactation than daughters of a bull with an evaluation of 0.

The second, Heifer Conception Rate (2%), refers to the maiden heifer's ability to conceive defined as percentage of inseminated heifers that become pregnant at each service. An HCR of 1 implies that daughters of this bull (or heifer) are 1% more likely to become pregnant as a heifer than daughters of a bull with an evaluation of 0.

Daughter Pregnancy Rate (7%) is defined as the percentage of non-pregnant cows that become pregnant during each 21-day period. A bull with a DPR of 1 indicates that his daughters are 1% more likely to become pregnant during an estrus cycle than a bull with an evaluation of 0. Each 1% *increase* in PTA DPR equals a *decrease* of four (4) days in days open.

For detailed information on USDA traits included in JPI$_{2015}$, refer to the Council on Dairy Cattle Breeding (CDCB) website at www.cdcb.us/reference.htm.

Summary

Jersey Performance Index™ (JPI™) is a breed-specific selection tool that has been continually reviewed and updated based on sound science and relative to the economics of dairying.

JPI$_{2015}$ includes eight traits as follows: 43% Protein : 15% Fat : 15% FTI : 10% PL : 7% DPR : 6% SCS : 2% CCR : 2% HCR. Overall, 58% of its emphasis is on production, 20% on udder health, 11% on longevity, and 11% on fertility.

Expected genetic response from JPI$_{2015}$ is annual gains of 5.2 lbs. PTA protein and 6.2 lbs. PTA fat, 6.7 days of Productive Life, plus changes in desirable directions for somatic cell score and cow fertility.

"The Board action to update JPI™ is grounded in science and the economics of profitability," commented AJCA President Chris Sorenson. "We are confident that it charts the proper course for selecting productive, fertile, healthy, long-lasting and trouble-free Jersey cows."

Calculation of the Jersey Udder Index™

This index is the sum of PTAs for udder traits multiplied by their percentage contribution to the animal's Jersey Performance Index$_{2015}$:

$$JUI_{15} = [(2.6 \times FU / SD\ FU) + (1.9 \times RH / SD\ RH) + (0.1 \times RUW / SD\ RUW) + (5.1 \times UD / SD\ UD) + (2.1 \times UC / SD\ UC) + (1.0 \times TP / SD\ TP) + (-1.0 \times TL / SD\ TL)]$$

Heifer and Bull Percentile Ranking Levels (P-Level)

The P-level is a useful tool to evaluate genetic merit of young Registered Jerseys™. It is a percentile ranking of the animal's Jersey Production Index™, displayed as P0 through P9. P-level is based upon Parent Average JPI, or genomic JPI when available.

The P-level indicates how one animal ranks compared to all other registered Jerseys of the same sex born in the same year. To interpret, insert the P-level in the blank in the following statement: "This heifer (bull) has a higher PA JPI than __0 percent of the registered Jersey heifers (bulls) born in the same year." *Example:* A P8 heifer born in 2013 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2013.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2009 to 2013, with projections for 2014 and 2015.

P-levels are printed on Official Performance Pedigrees for heifers, but not for bulls.

Table 1. Heifer P-Levels for Jersey Performance Index™

AJCA Animal Recording Systems and Registry Status

The American Jersey Cattle Association records animals under provisions of the Rules for the Registration and Transfer of Jersey Cattle. Animals are recorded under one of four (4) systems in the Association's permanent database.

Herd Register. *Established 1868.* Animals with HR status do not carry a prefix. The Association issues a green-bordered Certificate of Registration for these animals.

Genetic Recovery. *Adopted 1974.* This program provides for identification of purebred Jerseys with step-wise progression to HR status with the continued use of HR-status bulls:

1. *OA (Original Animal)*, a female with a known HR sire or out of a known HR dam, or qualified by genotyping. This animal is recorded with the prefix of OA and issued a gold-bordered Certificate of Identification.
2. *PR (Provisional Register)*, the daughter of an OA dam and a known HR sire. This animal is recorded with the prefix of PR and issued a gold-bordered Certificate of Identification.
3. *GR (Genetic Recovery)*, the daughter of a PR dam and a known HR sire, or the son of a PR dam and a known HR sire provided the bull and both parents are genotyped. This animal is recorded with the prefix of GR and issued a green-bordered Certificate of Registration.

Jersey Expansion Program. *Introduced 1999.* This program provides for the identification of animals with both Jersey and other-breed genetics in their pedigrees. Six continuous generations sired by Registered Jersey™ bulls starting with the first-generation female (J1) will result in an animal eligible for the AJCA Herd Register.

1. The first-generation crossbred female sired by a HR Jersey bull or out of a HR Jersey female is recorded with the prefix J1.
2. Females are recorded at all levels (J1 through J6).
3. Males are only eligible at the J4, J5 and J6 levels, and only when the bull and both parents are genotyped.
4. Offspring status will advance one level (a) when sired by a bull recorded in the AJCA Herd Register (HR status, no prefix) or (b) when one parent is three or more generations higher than another. For all other pedigree combinations, offspring status will be no higher than that of the lowest status parent.
5. AJCA Herd Register status is achieved by offspring of J6 and HR parents.

The Association issues a blue-bordered Certificate of Identification for animals recorded in Jersey Expansion.

Unregistered (UR). Animals with permanent identification that do not meet the requirements for any other registry status are recorded with the prefix UR and issued a gold-bordered Certificate of Identification.

Required Information. The American Jersey Cattle Association requires the following information for all animals to be recorded:

(a) birth date,

(b) permanent identification in the form of tattoo in the ear or AJCA-approved double-matching tamper-evident eartags, and

(c) parent information *(pedigree)*.

The animal name is selected by the First Owner.

Use the following tables to determine the AJCA registry status of females or males based on the registry status of the parents.

Recording Fees. Refer to the *Fees for Programs and Services* for recording fees. Lower Herd Register fees apply by being a member of the American Jersey Cattle Association and/or submitting applications on infoJersey or by electronic file. Registration is included in REAP (Registration–Equity–Appraisal–Performance) for animals under six months of age.

For complete details on programs and fees, contact Herd Services at 614/861-3636 or email records@usjersey.com.

The American Jersey Cattle Association

Young Sire Program and Genetic Diversity Program

Application for Enrollment

Jersey breed progress depends upon breeders taking the lead in sampling highly qualified young sires. Do your part to continue the genetic improvement of the Jersey breed by enrolling qualifying young bulls in the AJCA Young Sire Program or the Genetic Diversity Program

Young Sire Program (YSP)
This program identifies outstanding young bulls at an early age to encourage early sampling for an accurate multi-herd proof.

The nomination standard is a **genomic PTA** that equals or exceeds the *70th percentile* for Jersey Performance Index™, PTA pounds protein, or Net Merit dollars (NM$) of the NAAB G-code Jersey bulls. In the absence of a genomic evaluation, Parent Average may be substituted.

Current qualifying levels are +167 JPI or +36 lbs. protein or +434 NM$.

Genetic Diversity Program (GDP)
This program encourages the sampling of genetically diverse bulls. The genomic genetic evaluation of nominated bulls must equal or exceed the *50th percentile* for Jersey Performance Index™, PTA pounds protein, or Net Merit dollars (NM$) of the NAAB G-code Jersey bulls, **and** the bull's Genomic Future Inbreeding (GFI) must be *less than* 6%. In the absence of a genomic evaluation, Parent Average may be substituted.

Current qualifying levels are +153 JPI or +30 lbs. protein or +400 NM$.

Requirements for Both Programs
Bulls must be no older than 15 months of age at the time of nomination. Inheritance from a designated carrier of Limber Legs or Rectovaginal Constriction must be less than 12.5%.

Parentage must be qualified by genotyping and the bull listed with the AJCA.

A minimum of 200 units of semen must be frozen and stored if the bull is kept alive until his first CDCB daughter evaluation summary, or a minimum of 1,000 units frozen and stored if the bull is to be slaughtered.

For a YSP bull, the proving group must arrange daughter distribution to assure Reliability of at least 75% by the bull's second progeny test summary. **For a GDP bull,** the group must arrange daughter distribution in a minimum of 50 herds by the second progeny test summary.

PROGRAM BENEFITS

YSP and GDP bulls are designated on AJCA Official Performance Pedigrees and are also publicized through the Young Sire Availability Listing in *Jersey Journal.*

Apply Today
The enrollment fee is only $30, and the benefits many!

Herd Register: Code A and F Bulls - Pedigree and EFI/GFI
April 2015

This report lists all Code A & F bulls marketed in the U.S. ranked by Jersey Performance Index (JPI), with their NAAB Code and Short Name, plus sire and maternal grandsire. At the far right is the bull's Expected Future Inbreeding (EFI) estimate or, if he is genomically tested, the genomic estimate of future inbreeding (GFI). EFI/GFI have nearly the same interpretation and provide Jersey breeders an important tool for managing inbreeding levels.

The USDA-Animal Improvement Programs Laboratory calculates the EFI of future progeny based on a random sample of 1,000 potential mates born in the last five (5) years obtained from the AJCA database. Genotypes allow measuring actual homozygosity and percentages of genes in common instead of the expected fractions computed from pedigrees. For GFI, the reference population is all genotyped animals born in the last 10 years.

Genetic Recovery / Jersey Expansion Code A and F Bulls - Pedigree and EFI/GFI April 2015

This report lists all Code A & F bulls marketed in the U.S. ranked by Jersey Performance Index (JPI), with their NAAB Code and Short Name, plus sire and maternal grandsire. At the far right is the bull's Expected Future Inbreeding (EFI) estimate or, if he is genomically tested, the genomic estimate of future inbreeding (GFI). EFI/GFI have nearly the same interpretation and provide Jersey breeders an important tool for managing inbreeding levels.

The USDA-Animal Improvement Programs Laboratory calculates the EFI of future progeny based on a random sample of 1,000 potential mates born in the last five (5) years obtained from the AJCA database. Genotypes allow measuring actual homozygosity and percentages of genes in common instead of the expected fractions computed from pedigrees. For GFI, the reference population is all genotyped animals born in the last 10 years.

Young Sires Listed in NAAB Stud Code Order April 2015

Bulls born since October 1, 2012 and assigned stud codes by the National Association of Animal Breeders are listed in NAAB code order. Bulls designated by NAAB with the marketing code of G are not listed. Refer to separate reports in Section II for these bulls.

NAAB short names for bulls, their sires and maternal grandsires are listed. Genotype status is indicated by the density of the genotype chip used to the right of the Registration Number. Genomic PTAs for Jersey Performance Index™, milk, fat, protein, Somatic Cell Score, Productive Life, Daughter Pregnancy Rate, Net Merit dollars, Jersey Udder Index™ and Expected Future Inbreeding (GFI) are listed.

Traditionally calculated Parent Averages are provided for those bulls that have not been genotyped.

Sire Conception Rate: All Bulls Listed in NAAB Stud Code Order

Sire Conception Rate (SCR) is a national measure of A.I. bull fertility. For an evaluation to be publishable, a Jersey bull must have an A.I. status other than inactive and cannot be more than 13 years old. Bulls must also have at least 200 services in the last four years, 100 breedings in the most recent 12 months, and have been used in at least 10 herds.

SCR is expressed as the bull's difference from the average of evaluated bulls, which is set at 0.0 for each evaluation. For example, a bull with an SCR of 5.0 produced a conception rate 5.0% above average.

Bulls are listed in NAAB Code order and sorted within A.I. marketing organizations. Status codes are: A, Active A.I.; C, semen collected; F, foreign-sampled, semen available; G, genomically tested and marketed bull; I, inactive A.I.; L, limited use; N, non-A.I.; and P, multiherd sampled.

Three-Generation Potential Matings With Resulting Inbreeding Levels

You can use the table below to estimate the minimum level of inbreeding that will result from a potential mating. The top 18 Active and Foreign AI Bulls are listed across the top of the table. The far left-hand column lists the 32 most common sire-maternal grandsire combinations found in Registered Jersey females born since April 1, 2011.

Remember this is a minimum inbreeding level because it considers only the sire influence. Including the influence of the maternal line will increase the inbreeding values by 20% to 25%. Use JerseyMate to determine and manage the actual leval of inbreeding of these potential matings.

Herd Register: Young Sires Without Stud Codes Ranked by JPI™ April 2015

This report lists bulls born since April 1, 2014 that have a Parent Average Jersey Performance Index™ or Genomic Jersey Performance Index™ of 170 or greater and have not been assigned an NAAB stud code. One calf from any group of full brothers is listed by name, and the total number of full brothers is noted in the column labeled 'No. Sibs'.

Genetic Recovery / Jersey Expansion: Young Sires Without Stud Codes Ranked by JPI™ April 2015

This report lists bulls born since April 1, 2014 that have a Parent Average Jersey Performance Index™ or Genomic Jersey Performance Index™ of 170 or greater and have not been assigned an NAAB stud code. One calf from any group of full brothers is listed by name, and the total number of full brothers is noted in the column labeled 'No. Sibs'.

Information Presented on AJCA Performance Pedigrees

1. Animal sex, DHI herd number (cows only), AJCA registration name and registration number. Twins are labeled.
   A prefix is added to the name when the animal is not recorded in the AJCA Herd Register. For the Genetic Recovery program, these are: OA, first step; PR, second step; and GR, third step. For the Jersey Expansion program, J1 indicates the first-generation crossbred female that has a HR sire or dam. After J1, continuous generations sired by a Herd Register bull carry a prefix of J followed by a number (2 through 6). The prefix UR designates an animal recorded by the AJCA that does not meet requirements for Herd Register, Genetic Recovery or Jersey Expansion recording. Contact AJCA Herd Services or visit USJersey.com for detailed information on animal recording systems.
   A numeric code in brackets in a registration name indicates the number of generations (up to 6) the animal is descended from OA Oomsdale Gordo Goldie Gratitude{1}. Name suffixes include P (polled); PP (tested homozygous polled); ET (embryo transfer); ETS (split embryo); ETN (nuclear transfer, cloning); LL (designated carrier of genetic abnormality Limber Legs); RVC (designated carrier of genetic abnormality Rectovaginal Constriction); PTL (progeny tested for LL); and PTR (progeny tested for RVC).
2. GT indicates that an animal has been genotyped. Source of genomic information by density of the test chip is indicated (e.g., GT3K from 3K density chip, GT6K from 6K chip and so forth, with HD indicating 770K chip). GI indicates that the animal's genotype was imputed from progeny, while GA indicates that genomic data comes from genotyped ancestors.
   Official status for Jersey Haplotypes 1 and 2 based on a genotype of 6K or higher density is listed: F designating status Free, C designating status Carrier.
   Bulls enrolled in the Young Sire Program or Genetic Diversity Program are marked YSP or GDP, respectively. Bulls eligible for, but not enrolled in these programs are designated GQ (qualified for YSP), DQ (qualified for GDP), or DGQ (qualified for both programs). If assigned, the NAAB code for bulls is printed.
3. The date of birth (month, day, year) and, for cows, the DHI processing center control number (CONTROL #).
4. Permanent identification of the animal, labeled by form: tattoo (right ear / left ear), American ID eartag and/or electronic ID.
5. For heifers, the percentile (P-level) of the Parent Average (PA) or genomic PTA for Jersey Performance Index™ (JPI) is printed. P-level indicates how this individual ranks compared to other heifers born in the same year. When PA JPI is not available, the P-level is based upon PA protein.
   Expected Future Inbreeding (EFI), or if animal is genotyped, Genomic Estimate of Future Inbreeding (GFI). EFI estimates future progeny inbreeding, assuming that an animal is mated randomly to the current population. GFI is based on the animal's DNA test of actual homozygosity and percentages of genes in common with the genotyped Jersey population.
6. *Cows only:* Predicted Producing Ability (PPA) and Yield Deviation (YD) for milk, fat and protein. PPA predicts future production. Because PPA is determined relative to a constant genetic base, it can be used to compare one herd situation and is the most effective tool to identify cows that will be profitable milk producers. YD is the weighted average of lactation yield minus selected management and environmental factors, expressed relative to the breed base.
7. CDCB Predicted Transmitting Ability (traditional or genomic) for milk, fat and protein, Net Merit indexes (Cheese Merit dollars, CM$; Net Merit dollars, NM$; Fluid Merit dollars, FM$; Grazing Merit dollars, GM$), plus Productive Life (PL), fertility traits (Daughter Pregnancy Rate, DPR; Cow Conception Rate, CCR; Heifer Conception Rate, HCR), and Somatic Cell Score (SCS).
   The evaluation issue date and number of records (females) or daughters (bulls) are given, with the Reliability (%R) of the evaluation. Percentile (%ILE) indicates the animal's ranking relative to all others of its sex. PTAs can be compared to indicate which animal will, on the average, transmit higher production to offspring. The difference in PTAs between any two bulls is the amount their future daughters will differ in performance when matings are to dams of equal genetic merit.
   AJCA Predicted Transmitting Ability for Type (PTAT/GPTAT), Jersey Udder Index (JUI/GJUI) and Jersey Performance Index™ (JPI/GJPI) with the date of the evaluation.
   Jersey Performance Index™ combines PTA/GPTA for Protein, Fat, Functional Trait Index (FTI), PL, SCS and fertility traits (DPR, CCR and HCR), with relative weights of 43% Protein : 15% Fat : 15% FTI : 10% PL : 6% SCS : 11% combined fertility traits. JPI ranks animals for combined genetic merit (production, type, and fitness traits).
   PTAT/GPTAT is the genetic evaluation for final score–type relative to breed base. PTAs/GPTAs for type appraisal breakdown traits are printed.
   For young animals without their own performance information or that have not been genomically tested, Parent Average (PA) is calculated for milk, fat, protein, Net Merit indexes, type, and JPI. PA is the sum of 1/2 the sire's PTA and 1/2 the dam's PTA. PA estimates are also printed for appraisal breakdown traits. Reliability (%R) for these estimates is also printed.
8. Lactation records. Up to 16 records are printed, listing information in this order: age at calving, days milked, times milked per day, actual pounds milk, percent fat, actual pounds fat, percent protein, actual pounds protein, and data collection rating (DCR). If a verification test was conducted during the lactation, a V is printed. The 305-day, 2x, mature equivalent lactation average for records at least 180 days in length is also printed.
9. Type evaluations, the cow's age and final score. Final scores are: Excellent (90 and above); Very Good (80-89 inclusive); Desirable (70-79); Acceptable (60-69); and Poor (50-59). Scores for breakdown traits from the most recent appraisal are listed: ST, stature; SR, strength; DF, dairy form; RA, rump angle; RW, rump width; RL, rear leg set; FA, foot angle; FU, fore udder; RH, rear udder height; RUW, rear udder width; UC, udder cleft; UD, udder depth; TP, teat placement; TL, teat length; RTR, Rear Teat Placement-Rear View; RTS, Rear Teat Placement-Side View.
10. The sire of the animal, his registration number, and when applicable, genotype, JH1 and JH2 status, sire program and NAAB code. The CDCB genetic evaluations for milk, fat, protein, CM$, NM$ and FM$; fitness traits (PL, DPR, CCR, HCR and SCS); and AJCA genetic evaluations for type are listed, with evaluation date.
11. The dam, her registration number, genotype status and haplotype test status (when applicable), permanent ID, lactation records, production summary, and genetic evaluations are given. Up to 12 lactations are printed.
12. Age and final score, with type breakdowns for last evaluation.
13. The date that this document was compiled and printed.
14. The Recorded Owner, as indicated on the records of the AJCA.
15. The Breeder of the animal (Recorded Owner of the dam at conception of animal).
16. *Females only:* Total of registered progeny, followed by registration number, sex, tattoo and genotype status (if applicable) for the eight youngest progeny, listed in reverse birth order.
17. The paternal grandsire *(refer to 10)*.
18. The paternal grandam *(refer to 11)*. Up to four lactations are printed. Cows with AJCA registration numbers below 2,300,000 or cows registered in other countries may not have lactations printed. Only the latest final score is given.
19. The maternal grandsire *(refer to 10)*.
20. The maternal grandam *(refer to 11)*. Up to 4 lactations, along with type evaluations are printed.
