

VOLUME 21 NUMBER 3 DECEMBER 2016 FEMALES
AMERICAN JERSEY CATTLE ASSOCIATION

JERSEY GENETIC SUMMARY

CDCB Report: Longevity Advantage Is Maintained As Breed Grows

In 2006, scientists based at the Animal Improvement Programs Laboratory (now AGIL) published an analysis of U.S. dairy cow survival that found, across breeds, the best survival rate from lactation to lactation was for Jerseys and, on average, Jerseys had the most calvings per lifetime.

Because the study used records from 1980 through the first two months of 2005, it provided a valuable historical perspective on the question of survivability, but not much insight about the ongoing situation on American dairy farms. More importantly, the report didn't answer the big question: "What is it that makes herd owners and managers remove a cow from the herd?"

That information is now provided in annual reports produced by the Council on Dairy Cattle Breeding (CDCB) using destination categories (*remained in herd, sold for dairy purposes, sold for slaughter or salvage, or died*) and the descriptive reasons for leaving the herd gathered by the national Dairy Herd Information program.

These annual studies show what is happening in tens of thousands of dairy herds around the country, across different climates, different types of feeding programs, all variations of housing and milking systems, and different breeding, health and management programs. Detailed information is analyzed for the seven breeds and also two groups of crossbreds: CB90, those with heterosis greater than 90% (*primarily first-generation crosses between two breeds*) and CB50, those with 50% to 90% heterosis (*most often crosses of one of the two F1 breeds back onto the F1*).

The 2015 report released August 4, 2016 included 3,968,392 cows that completed lactations during the year (up 3.2% from the previous year). After Holstein (84.2% of total), Jersey was the second largest breed group with

338,618 cows (8.5%), adding 21,274 cows (+6.7%) from the 2014 study. Crossbreds were 4.9% of the total at 196,047 cows, split between CB90 (121,016 cows) and CB50 (75,031).

To get a sense of current trends in cow survival and why U.S. dairy cows are culled, we re-analyzed the data into two groups for comparison: Jerseys and "all other cows." The results are summarized in Table 1.

Jersey cows had the best survival rate from one lactation to the next. The total rate of 72.3% for Jerseys was 5.4% higher than the "all other cows" comparison group. This means, in turn, that Jersey had a culling rate 5.4% lower than "all other cows."

Looking at why cows were removed, there is no single reason that separates Jerseys from "all other cows," but rather incremental differences across all termination codes that add up to a lower rate of exiting the herd. Getting bred back and having fewer feet and leg problems stand out in the overall, positive profile for Jerseys.

The 2015 study is much the same as the previous reports posted on the CDCB website. From the first, covering two years (2007-08), to this latest one, Jersey cows are the most likely to stay in production from one lactation to the next. In that same span of time, production per cow has increased 14% on an energy-corrected basis and Jersey DHIA cow enrollment has jumped 72%.

Keeping that breed advantage is part-and-parcel of breed growth, and thus a timely reminder to never lose focus on breeding for the things that drive herd survival: profitable yield, easy calving and breeding back on time, trouble-free feet and legs and, most of all, sound udder traits.

Table 1. Percentages of cows enrolled on Dairy Herd Improvement programs in 2015 continuing in production versus exiting the herd.

Status at end of lactation	All other breeds and crossbreds	Jersey
Continuing in production (%)		
Remained in herd	63.7	67.1
Sold for dairy purposes	3.1	5.2
Total	66.9	72.3
Removed from production (%)		
Unspecified: other reason or no reason given	10.3	8.2
Low production (<i>not caused by other reasons</i>)	6.5	6.1
Death	5.4	5.7
Reproduction problems	5.0	3.1
Mastitis or high somatic cell count	4.5	4.1
Locomotion problems	1.5	0.4
Undesirable conformation	< 0.1	< 0.1
Behavior (<i>undesirable temperament</i>)	< 0.1	< 0.1
Total	33.1	27.6

Top 500 Females (cows, heifers) Ranked by Genomic JPI™.....	11
Top 200 Cows Ranked by Genomic JPI™.....	22
Top 500 Genotyped Heifers Ranked by Genomic JPI™, by sire group	26
Top 100 Polled Females Ranked by Genomic JPI™	39

SECTION III. GENERATION COUNT 3 or GC 4-6 with BBR 93 and LOWER

Top Females (cows, heifers) Ranked by Genomic JPI™.....	45
Top Cows Ranked by Genomic JPI™.....	50
Top Genotyped Heifers Ranked by Genomic JPI™, by sire group	52
Top Polled Females Ranked by Genomic JPI™	58

SECTION IV. HERD REGISTER: TRADITIONAL EVALUATIONS

Top 200 Cows Ranked by Traditional JPI™	61
Top 400 Heifers Ranked by Parent Average JPI™, by sire group	65

SECTION V. GENERATION COUNT 3 THROUGH 6: TRADITIONAL EVALUATIONS

Top Cows Ranked by Traditional JPI™	79
Top Heifers Ranked by Parent Average JPI™, by sire group	83

SECTION VI. HERDS

Top 25% REAP Herds, Ranked by Herd Average JPI™	95
-------------------------------------------------------	----

SECTION VII. REPORTS ONLINE (<http://greenbook.usjersey.com>)

Updated monthly between official evaluations issued in April, August and December:

All genomic reports in Sections II and III, plus the following reports by Herd Register or Registry Status GR and J3 through J6 status:

- Top 1.5% Cows with GPTAs ranked by Genomic Jersey Performance Index™
- Top 1.5% Heifers Ranked by Genomic Jersey Performance Index™ or Parent Average JPI
- Top 1.5% Cows Ranked by Traditional Jersey Performance Index™

Glossary of Terms

Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), Heifer Conception Rate (HCR): Genetic evaluations of fertility. DPR measures the percentage of non-pregnant cows that become pregnant during each 21-day interval where 1% in PTA DPR equals 4 fewer days open. HCR and CCR measure the percentage of inseminated heifers or cows that become pregnant at each service where 1% in PTA means more likely to become pregnant during that estrus cycle compared with an evaluation of 0.

Expected Future Inbreeding (EFI): Estimate of future progeny inbreeding, assuming that an animal is mated randomly.

Genomic “G” Codes: GT, animal has been genotyped using one of a variety of offered chip densities (e.g., GT13K with 13K chip); GI for genotype through imputation from progeny, but not genotyped; and GA, inclusion of information from genotyped ancestors.

Genomic Future Inbreeding (GFI): Estimate of inbreeding in future offspring, based on parent’s actual homozygosity and percentages of genes in common with the genotyped breed population.

Genomic Predicted Transmitting Abilities (GPTAs): Estimate of genetic merit calculated from (1) information from genotypes or imputed genotypes of ancestors DNA analysis of functional genes inherited by a particular animal; plus (2) individual performance and (3) pedigree information.

Jersey Performance Index™ (JPI): Combines PTA or GPTA Protein, Fat, Functional Trait Index (FTI), PL, SCS and three

fertility traits (DPR, CCR, HCR) with the emphasis of 43% P : 15% F : 15% FTI : 10% PL : 6% SCS : 7% DPR : 2% CCR : 2% HCR. Ranks animals for combined genetic merit for production, type and fitness traits.

Jersey Udder Index™ (JUI): Based on the Functional Trait Index (FTI) weightings for udder traits (*refer to formula, page 6*).

Net Merit dollars (NMS, also CMS, FMS and GMS): Expected lifetime profit as compared with the breed base cows born in 2010, for four production/economic conditions. Described at <http://aipl.arsusda.gov/reference/nmcalc-2014.htm>.

Parent Average: Estimate of an individual’s eventual PTA based on the average of the parents’ traditional PTAs.

Percentile: A ranking relative to the population. For example, a bull with a 90 percentile ranking or a heifer that is a P9 is ranked higher than 90 percent of the population.

Predicted Transmitting Ability (PTA): The best predictor of genetic merit; specifically what a bull or cow is expected to transmit for a particular trait to their offspring. *See also GPTA (above)*.

Productive Life (PL): Time in the milking herd before removal by voluntary culling, involuntary culling, or death.

Sire Conception Rate (SCR): Phenotypic predictor of bull fertility, expressed as a relative conception rate, measured for the first seven (7) breedings of the cow (no heifer breedings).

Somatic Cell Score (SCS): Indicator trait for mastitis resistance based on the direct measure of somatic cells in milk samples.

Heifer and Bull Percentile Ranking Levels (P-Level)

The P-level is a useful tool to evaluate genetic merit of young Registered Jerseys™. It is a percentile ranking of the animal’s Jersey Production Index™, displayed as P0 through P9. P-level is based upon Parent Average JPI, or genomic JPI when available.

The P-level indicates how one animal ranks compared to all other registered Jerseys of the same sex born in the same year. To interpret, insert the P-level in the blank in the following statement: “This heifer (bull) has a higher PA JPI than __0 percent

of the registered Jersey heifers (bulls) born in the same year.”
Example: A P8 heifer born in 2015 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2015.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2012 to 2015, with projections for 2016 and 2017.

P-levels are printed on Official Performance Pedigrees for heifers, but not for bulls.

Table 1. Heifer P-Levels for Jersey Performance Index™

Birth Year	Mean	P0	P1	P2	P3	P4	P5	P6	P7	P8	P9
2012	23	< -46	-46	-12	7	21	32	43	54	66	82

2015 Jersey Performance Index™ (JPI)

Calling Jersey Performance Index™ “a strategy for breed improvement,” the AJCA Board of Directors authorized updates including adjusted trait weights and the addition of new traits for implementation with the December 2014 genetic evaluations.

The objective of Jersey Performance Index™ is to increase lifetime net income. The 2015 version of JPI was developed from the most extensive evaluation of production, longevity and health data ever undertaken for a JPI™ update, conducted by geneticist Kent Weigel of the University of Wisconsin–Madison.

In JPI₂₀₁₅, 58% of the index’s value is placed on production traits (PTA protein and PTA fat). The remaining 42% is contributed by six health, fitness and longevity traits: the Functional Trait Index (FTI), and USDA PTAs for Productive Life (PL), Somatic Cell Score (SCS), and three fertility traits: Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), and Heifer Conception Rate, HCR).

Traits and their relative weights in JPI₂₀₁₅, with changes from the previous version noted in parentheses, are 43% PTA protein (+1%); 15% PTA fat (no change); 15% Functional Trait Index (no change); 10% Productive Life (-2%); 6% Somatic Cell Score (no change); and 7% Daughter Pregnancy Rate (-3%), plus 2% Cow Conception Rate (new) and 2% Heifer Conception Rate (new) (see also Table 1).

While most traits of the JPI™ index have trended in desired directions since the previous update in 2010, fertility traits have not been improving, leading to the decision to increase selection pressure by adding the cow and heifer conception traits. Also, because the demand

for and value of protein continues to grow in domestic and international milk markets, the slight shift of 43% protein to 15% fat puts additional selection pressure on protein yield.

Regrouping by functional categories, production receives 58% of the emphasis in the new formula. Udder health at 20%

is a combination of direct selection for lower Somatic Cell Score (especially important to capture quality premiums), plus udder traits included in the Functional Trait Index (FTI). There is 11% on herd life, through PTA Productive Life plus the body and feet traits in FTI. Lastly, 11% is placed on fertility.

“Selection for an index of economically important traits is the optimal way to achieve breed improvement,” Dr. Weigel observed, “however, the index must be updated periodically to ensure that it reflects current economic conditions on the farm, as well as current strengths and weaknesses of the breed.

“The 2015 revision focused on prediction of lifetime net profit from production, type, health, longevity, and fertility traits that are available early in life, with an emphasis on using the most recent

cow population possible and achieving a balance between timely input prices and stability of these prices over time.”

Method Used For 2015 Updates

Unlike previous updates, which included only cows with completed productive life, Weigel also analyzed cows from the current population. Records from 328,312 Jersey cows with first calving from January 1, 2001 through December 31, 2012 were provided through the cooperation of the dairy records processing centers (DRPCs).

A total of 264,681 cows had left the herd at the time of analysis, and their lifetime profit records were considered as complete. An additional 63,631 cows were still in the herd, and their records were considered as in-progress, such that their profit totals to date were compared with those of contemporary cows in the

same year of first calving. Up to nine lactations per cow were used, and lifetime profit records for cows that remained in the herd after nine lactations were treated as in-progress.

Income sources considered were from protein, fat and total
(continued on next page)

Calculation of the Jersey Performance Index™

Beginning with December 2014 genetic evaluations, JPI™ is calculated as follows:

$$\text{JPI}_{2015} = (43 \times \text{PTA protein} / \text{SD}) + (15 \times \text{PTA fat} / \text{SD}) + (10 \times \text{PTA Productive Life} / \text{SD}) + [6 \times (3 - \text{PTA Somatic Cell Score}) / \text{SD}] + (7 \times \text{PTA Daughter Pregnancy Rate} / \text{SD}) + (2 \times \text{PTA Cow Conception Rate} / \text{SD}) + (2 \times \text{PTA Heifer Conception Rate} / \text{SD}) + \text{Functional Trait Index}_{2015}$$

where Functional Trait Index equals the PTAs of linear type traits weighted by their relative economic contribution to JPI₂₀₁₅ (see Table 2).

Table 1. History of Traits and Weights (%) Used to Calculate PTI (1998) and Jersey Performance Index™.

Year	Protein	Fat	FTI	PL	SCS	FUI	DPR	CCR	HCR
1998	55.5	22.2	16.7		5.6				
2002	50.0	20.0	15.0	5.0	5.0	5.0			
2005	50.0	20.0	15.0	3.75	3.75	3.75	3.75		
2006	40.0	20.0	15.0	12.0	3.0	3.0	7.0		
2010	42.0	15.0	15.0	12.0	6.0		10.0		
2015	43.0	15.0	15.0	10.0	6.0		7.0	2.0	2.0

solids, as well as milk quality premiums, salvage value and calf value. Expenses included feed for lactation, growth and maintenance during the rearing, lactating and dry periods, as well as breeding costs and replacement costs.

Input prices for milk, feed, salvage, and calf value were from the USDA Agricultural Marketing Service, whereas input prices for replacement females were from the Jersey Marketing Service. Prices represented weighted averages from the past three years.

FTI Updates, Presentation of Jersey Udder Index

Of the eight components of JPI™, only one—the AJCA Functional Trait Index—captures the effects of type traits *within* production on lifetime profitability. It assesses how functional type traits are important to the Jersey cow’s economic survival. As such, it pinpoints where improvement is needed and needed most, and where opportunities for further gains are possible.

A new approach was used by Dr. Weigel to delineate the direct contribution of each type trait within the Functional Trait

Index to Jersey Performance Index™. In the geneticist’s words, the relationships are now “transparent.”

Table 2 shows that what will make the most difference in improving Jersey profitability going forward is increasing selection pressure on udder traits. But as always, some traits are more important than others, a fact clearly depicted in the updated Jersey Udder Index™, which is derived from FTI. Udder Depth is the most important, followed by three traits (Fore Udder Attachment, Udder Cleft and Rear Udder Height) that have similar influence on cow survival and lifetime net income.

Jersey Udder Index™ was previously reported in PTA form. Now the JUI number is simply how many points udder traits add (or subtract) from Jersey Performance Index™. In short, JUI’s meaning is linked directly to an animal’s JPI.

To illustrate, A, F and G code bulls in the December 2014 evaluation averaged 10.6 for JUI. The JPI average was 121. So for the hypothetical average Jersey bull at JPI 121, 10.6 of those points are from JUI. Think of them as JPI udder points.

Fertility Traits

Direct selection for fertility was added to JPI™ in 2005 and has seen increasing emphasis with each subsequent update. In

addition to Daughter Pregnancy Rate (DPR), JPI₂₀₁₅ includes two new fertility measures, bringing total emphasis to 11% in the index.

The first, Cow Conception Rate (2%), measures the lactating cow’s ability to conceive defined as percentage of inseminated

cows that become pregnant at each service. A CCR of 1 implies that daughters of this bull (or cow) are 1% more likely to become pregnant during that lactation than daughters of a bull with an evaluation of 0.

The second, Heifer Conception Rate (2%), refers to the maiden heifer’s ability to conceive defined as percentage of inseminated heifers that become pregnant at each service. An HCR of 1 implies that daughters of this bull (or heifer) are 1% more likely to become pregnant as a heifer than daughters of a bull with an evaluation of 0.

Daughter Pregnancy Rate (7%) is defined as the percentage of non-pregnant cows that become pregnant during each 21-day period. A bull with a DPR of 1 indicates that his

daughters are 1% more likely to become pregnant during an estrus cycle than a bull with an evaluation of 0. Each 1% *increase* in PTA DPR equals a *decrease* of four (4) days in days open.

For detailed information on USDA traits included in JPI₂₀₁₅, refer to the Council on Dairy Cattle Breeding (CDCB) website at www.cdcb.us/reference.htm.

Summary

Jersey Performance Index™ (JPI™) is a breed-specific selection tool that has been continually reviewed and updated based on sound science and relative to the economics of dairying.

JPI₂₀₁₅ includes eight traits as follows: 43% Protein : 15% Fat : 15% FTI : 10% PL : 7% DPR : 6% SCS : 2% CCR : 2% HCR. Overall, 58% of its emphasis is on production, 20% on udder health, 11% on longevity, and 11% on fertility.

Expected genetic response from JPI₂₀₁₅ is annual gains of 5.2 lbs. PTA protein and

6.2 lbs. PTA fat, 6.7 days of Productive Life, plus changes in desirable directions for somatic cell score and cow fertility.

“The Board action to update JPI™ is grounded in science and the economics of profitability,” commented AJCA President Chris Sorenson. “We are confident that it charts the proper course for selecting productive, fertile, healthy, long-lasting and trouble-free Jersey cows.”

Table 2. Relative weights for specific traits and trait groups in Jersey Performance Index₂₀₁₅.

Trait Group	Relative Weight (%)	Specific Trait (Direction)	Overall Weight (%)		
Production	58.0	Protein (+)	43.0		
		Fat (+)	15.0		
		Productive Life (+)	10.0		
Health	27.0	Somatic Cell Score (-)	6.0		
		Daughter Pregnancy Rate (+)	7.0		
		Cow Conception Rate (+)	2.0		
		Heifer Conception Rate (+)	2.0		
		Functional Trait Index:			
		Udder Depth (+)	5.1		
		Fore Udder Attachment (+)	2.6		
Udder	13.8	Udder Cleft (+)	2.1		
		Rear Udder Height (+)	1.9		
		Teat Placement (+)	1.0		
		Teat Length (-)	1.0		
		Rear Udder Width (+)	0.1		
		Body	1.0	Stature (-)	0.6
				Rump Width (+)	0.2
				Strength (-)	0.1
				Rump Angle (-)	0.1
				Dairy Form (+)	0.0
Mobility	0.2	Foot Angle (+)	0.1		
		Rear Legs (-)	0.1		

Calculation of the Jersey Udder Index™

This index is the sum of PTAs for udder traits multiplied by their percentage contribution to the animal’s Jersey Performance Index₂₀₁₅:

$$\begin{aligned}
 \text{JUI}_{15} = & [(2.6 \times \text{FU} / \text{SD FU}) + (1.9 \times \text{RH} / \text{SD RH}) + (0.1 \times \text{RUW} / \text{SD RUW}) \\
 & + (5.1 \times \text{UD} / \text{SD UD}) + (2.1 \times \text{UC} / \text{SD UC}) \\
 & + (1.0 \times \text{TP} / \text{SD TP}) + (-1.0 \times \text{TL} / \text{SD TL})]
 \end{aligned}$$

AJCA Pedigree Recording and Registry Status

The *Rules for the Registration and Transfer of Jersey Cattle* define the programs and procedures for recording animals in the permanent database of the American Jersey Cattle Association.

The Association records descendants of animals registered in the AJCA Herd Register through rules for the Herd Register and Generation Count system. It also records registered Jersey cattle imported from countries having herd books recognized by the Association.

Herd Register

Animals with Herd Register (HR) status have seven (7) or more unbroken generations of known Jersey ancestors that are recorded by the Association. The Association issues a green-bordered *Certificate of Registration* for these animals.

Generation Count Recording

The Association also records:

- (a) animals that exhibit the characteristics of Jersey cattle but lack complete documentation of parentage, and
- (b) animals that have one known and AJCA-recorded Jersey parent and a parent of another breed.

With the continued use of AJCA Herd Register status bulls, progeny will progress to HR status (*see table, this page*).

1. Females are recorded at all Generation Counts.
2. Generation Count {1} is assigned to the female that has one known parent (sire or dam) recorded by the AJCA. The other parent may be completely unknown or of another breed. If both parents are unknown, the animal may be qualified for recording by being genotyped (*see notes, table*).
3. Bulls may be recorded starting at Generation Count {3} with the stipulations that the bull is genotyped and has a Breed Base Representation (BBR) value of 83 or greater and its sire and dam are also genotyped (*see notes, table*).
4. The numerical designation for progeny will increase by one (1) from the Generation Count of the sire or dam, whichever is lowest (*refer to table*).
5. Progeny of Generation Count {6} parents have Herd Register status and do not have a suffix in their registration names.
6. When an unknown animal or animal of another breed is

introduced to an animal's pedigree, the Generation Count will be reset to start at {1}.

The Generation Count suffix is an integral part of the animal name.

The gold-bordered *Certificate of Identification* is issued to animals recorded at Generation Counts 1, 2 and 3. Generation Count 4, 5 and 6 animals are issued the green-bordered *Certificate of Registration*.

Unregistered (UR)

Animals with permanent identification that are not qualified to be recorded in the Herd Register or with a Generation Count are recorded with the prefix UR. The *Certificate of Identification* is issued to the owner.

Required Information

In all cases, the American Jersey Cattle Association requires the following information:

- (a) birth date of the animal,
- (b) permanent identification in the form of tattoo in the ear or AJCA-approved double-matching tamper-evident ear tags, and
- (c) parent information (*pedigree*).

The First Owner selects the name used to record the animal. As required, prefix and suffix designations will be added per AJCA rules.

Eligibility for National Awards, Shows and Sales

Females with Generation Count 4 or greater are eligible for Honor Roll, Hall of Fame, and National Class Leader recognition, the President's Trophy, Hilmar Cheese Award, Living Lifetime Production Contest and National Jersey Youth Production Contest, and included in calculations of AJCA herd lactation and Jersey Performance Index™ averages.

Animals recorded at Generation Count 4 and higher are eligible for national shows, AJCA-designated regional shows and national sales.

The Foundation is Pedigree. BBR Adds to What You Know.

Generation Count indicates the depth to which the American Jersey Cattle Association documents an animal's pedigree. Breed Base Representation provides important and complementary information.

Breed Base Representation

Breed Base Representation (BBR) is a genomic trait that as-

AJCA Recording System, effective March 12, 2016							
Dam Status	Recording Status of Sire						HR
	UR [†]	{2} [‡]	{3} [§]	{4}	{5}	{6}	
Status of Progeny (<i>see Notes</i>)							
UR [†]	UR [†] or {1} [§]	{1}	{1}	{1}	{1}	{1}	{1}
{1}	{1}	{2}	{2}	{2}	{2}	{2}	{2}
{2}	{1}	{3}	{3}	{3}	{3}	{3}	{3}
{3}	{1}	{3}	{4}	{4}	{4}	{4}	{4}

{5}	{1}	{3}	{4}	{5}	{6}	{6}	{6}
{6}	{1}	{3}	{4}	{5}	{6}	HR [#]	HR [#]
HR	{1}	{3}	{4}	{5}	{6}	HR [#]	HR [#]

[†] UR prefix assigned to animals not meeting recording program criteria.

[‡] GC {2} males recorded according to rules prior to March 14, 2015 and were grandfathered.

[§] Female recording starts at Generation Count 1, either (a) by pedigree listing a known and AJCA-recorded Jersey parent or (b) when qualified by genotyping.

[§] Male recording starts at Generation Count 3. GC {3} to {6} recorded with UR prefix until the following requirements are met: (a) genotyping resulting in a Breed Base Representation (BBR) value of 83 or greater; (b) genotyping the sire; and (c) genotyping the dam.

[#] Males with Herd Register (HR) status are not required to be genotyped for registration.

asses the similarity at the level of DNA of a genotyped animal to breed reference groups for Jersey and all others with genomic evaluations (in chronological order, Holstein, Brown Swiss, Ayrshire and, most recently, Guernsey). Rules and publication policies for BBR are established by the Council on Dairy Cattle Breeding (CDCB).

BBR is an outgrowth of studies at the Animal Genomics & Improvement Laboratory (AGIL) of USDA showing that if identification of the sire, maternal grandsire, or the maternal great-grand sire were not reported, their identity could be discovered in over 99%, near 97% and 92% of the cases, respectively, when tested with a 50K chip. This, in turn, meant that substantial information was available to determine the extent to which alleles of various breeds appear to be represented in an animal's genetic makeup, even when pedigree information is limited or missing.

Definition of BBR and Reference Group

Genomic BBR assesses the degree to which alleles in an individual animal's genome are in common with the allele frequency of each and every breed reference group (*Ayrshire, Brown Swiss, Guernsey, Holstein and Jersey*). The more an animal's genetic make-up resembles its breed reference group, the higher its BBR for the primary breed.

There are 3,147 A.I. bulls in the Jersey reference group (*June 2016*), meeting these selection criteria established by CDCB:

1. are genotyped, *and*
2. have daughters with milk evaluations, *and*
3. all 30 animals in the 5-generation breed stack are identified with the breed code Jersey; *and*
4. if born 2000 and later, all ancestors in the 5-generation pedigree are known.

Reference groups will be updated annually with the April official genetic evaluations.

Calculation and Reporting of BBR

CDCB policy is to report BBR values of 94 or greater for one breed as 100. BBRs below 94 are reported as calculated.

BBR is calculated and reported only once for all genotyped animals, unless re-genotyped with a higher density chip.

Sources of Variation

Variation in BBR values is explained by the following factors.

Within Breed. Animals whose ancestors have been accurately documented purebreds for many generations often obtain a BBR for the primary breed less than 100, simply due to the calculation procedures. Animals with BBRs from 90 to 97 may also have outcross bloodlines relative to the reference group.

Common Alleles. Precise percentages of breed sources are not possible simply because animals vary. Also, because there are common alleles across breeds, the contribution from the primary breed could be off by 5% or even more from that derived.

Crossbreeding. A BBR lower than 90 usually indicates evidence of crossbreeding. In some cases, determining whether *crossbreeding or outcross bloodlines* is the basis for a lower relationship to the breed reference group can be difficult. Mistakes will be made if conclusions are drawn without considering that BBR numbers for the evaluated breeds could vary by as much as 5% from what is expected, and occasionally even more.

Breeds Referenced. Only five breeds have enough A.I. bulls genotyped to form a breed reference group. The BBR for each animal is determined relative only to these five groups, and even if

all of an animal's genes do not come from the referenced breeds.

Understanding BBR

To reiterate, animals whose ancestors have been true purebreds for many generations often obtain a BBR less than 100, primarily because of how BBR is determined.

BBRs in the range of 90 to 97 can reveal the presence of outcross bloodlines. When an animal is unrelated to the North American population or has bloodlines not well represented among the bulls included in the breed reference group, its BBR could well be in the mid-90s.

BBR is effective at detecting the presence of genetics from other breeds when such other breeds have provided a significant percentage of the alleles. Still, spread in BBR numbers is to be expected. Analysis of BBRs of animals that have three grandparents of breed X and one grandparent of breed Y (*expected breed alleles 75% and 25%*) show primary breed BBRs as low as 70 or as high as 80, simply due to limitations of the method. Some animals will deviate even more due to the random nature of which chromosomes are transmitted from grandparents through their sire and dam.

Finally, determining whether crossbreeding or outcross bloodlines is the reason for a relatively low BBR can be difficult especially when pedigree information is missing or limited.

Requirements to Record Jersey Bulls

By action of the Board of Directors on March 12, 2016, males that will have a Generation Count suffix in their names must meet additional criteria in order to be recorded with the American Jersey Cattle Association. These criteria are: (1) a minimum of Generation Count 3; (2) the bull, its sire and its dam must be genotyped; and (3) the bull must have a BBR equal to or greater than 83.

Males that can be recorded with Herd Register (HR) status do not have to be genotyped in order to be registered.

Publication of BBR

The AJCA publishes genomic BBR on pedigree, performance and genetic evaluation reports, and JMS sale catalog pedigrees.

The combination of AJCA registry status and BBR criteria are used to publish primary reports in the *Jersey Genetic Summary* ("Green Book"), as described below.

- *Males:* (a) all Herd Register and also Generation Count 4-6 bulls with BBRs expressed as 100; and (b) all Generation Count 3 bulls and Generation Count 4-6 bulls with BBRs less than 94;
- *Genotyped females:* (a) all Herd Register and also Generation Count 4 and greater with BBRs expressed as 100; and (b) all Generation Count 3 females and Generation Count 4-6 females with BBRs less than 94;
- *Non-genotyped females:* (a) all Herd Register; and (b) Generation Count 3 through 6.

Bulls must have their own genotype and have a BBR to be included in lists of *Active & Foreign Bulls Marketed in the U.S.*

Summary

Generation Count indicates depth of recorded Jersey ancestry, and Breed Base Representation provides a genomic assessment of relationship to the Jersey breed reference group. Together, they simplify recording animals with the American Jersey Cattle Association, contribute to greater accuracy in pedigrees and genetic evaluations, and improve transparency of information.

Section II

Herd Register or Generation Count 4-6 and BBR 100

Herd Register or Generation Count 4-6 and BBR 100: Top 500 Females by Genomic JPI™ December 2016

This list ranks by GJPI, the top 500 females having Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on December 1, 2016 and not have a GPTA based on lactation information. Ties are broken by PTA protein.

Herd Register or Generation Count 4-6 and BBR 100: Top 200 Cows Ranked by Genomic JPI™ December 2016

This list ranks by GJPI, the top 200 cows with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. Cows must have their own genotype, have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on December 1, 2016. Ties are broken by PTA protein.

Herd Register or Generation Count 4-6 and BBR 100: Top 500 Heifers for Genomic JPI™ December 2016

This list ranks by GJPI, the top 500 heifers with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. The list is organized by sire groups. Heifers must be no older than three years of age on December 1, 2016 and not have a GPTA based on lactation information. Genotype source is identified by chip density in the column labeled GT.

Herd Register or Generation Count 4-6 and BBR 100: Top 100 Polled Females by Genomic JPI™ December 2016

This list ranks by GJPI, the top 100 polled females recorded with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on December 1, 2016 and not have a GPTA based on lactation information.

Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Cows Ranked by Genomic JPI™ December 2016

This list ranks by GJPI, the top cows recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. Cows must have their own genotype, have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on December 1, 2016. Ties are broken by PTA protein.

Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Heifers for Genomic JPI™ December 2016

This list ranks by GJPI, the top 500 heifers recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. The list is organized by sire groups. Heifers must be no older than three years of age on December 1, 2016 and not have a GPTA based on lactation information. Genotype source is identified by chip density in the column labeled GT.

Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Polled Females by Genomic JPI™ December 2016

This list ranks by GJPI, the top polled females recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on December 1, 2016 and not have a GPTA based on lactation information.

Section IV

Herd Register Females: Traditional Evaluations

Herd Register: Top 200 Cows Ranked by Traditional JPI™ December 2016

The top 200 cows recorded in the AJCA Herd Register are listed in rank order for traditionally calculated Jersey Performance Index™ (JPI). Ties are broken by PTA protein. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on December 1, 2016.

Generation Count 3 through 6: Traditional Evaluations

Generation Count 3 - 6: Top Cows Ranked by Traditional JPI™ December 2016

This list ranks the top cows recorded at Generation Counts 3 through 6 for traditionally calculated Jersey Performance Index™ (JPI). Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on December 1, 2016.

Section VI

Herds

REAP Herds Ranked by Average Jersey Performance Index™ (JPI)

The top 25% of herds ranked by average Jersey Performance Index™ are listed. Herds must be enrolled in the AJCA REAP program and have a minimum of 10 cows with JPIs. The average includes only Herd Register and Generation Count 4, 5 and 6 cows that have calved within the past 15 months with no termination code associated with the current lactation. Herds with same JPI average are ranked by the average for PTA protein.

Dec 2016		PTA Milk	PTA Fat	PTA Prot	CM\$	NM\$	FM\$	GM\$	JPI	
Breed Averages and Standard Deviations based on 106,974 cows in 811 currently enrolled REAP herds.		Brd Avg	110	12	8	129	122	103	102	43

Information Presented on AJCA Performance Pedigrees

1. Animal sex. Twins are labeled. DHI herd number (*cows only*).
2. AJCA registration name and registration number. A Generation Count suffix is added to the registration name between braces { } when the animal's pedigree includes either (a) an unknown animal or (b) an animal of another breed. The suffix indicates the number of generations of AJCA-recorded ancestry from 1 to 6. Females are recorded at all levels. The lowest Generation Count for males is {3}, excepting bulls that were grandfathered because they met AJCA requirements and were recorded prior to March 14, 2015. Animals that have Herd Register status (*seven or more generations of AJCA-recorded ancestry*) do not have a Generation Count suffix. The prefix UR designates an animal that has permanent identification but does not meet AJCA requirements for Jersey pedigree. Other suffixes indicate P (polled); PP (tested homozygous polled); ET (embryo transfer); ETS (split embryo); ETN (nuclear transfer, cloning); LL (designated carrier of genetic abnormality Limber Legs); RVC (designated carrier of genetic abnormality Rectovaginal Constriction); PTL (progeny tested for LL); and PTR (progeny tested for RVC).
3. GT indicates that an animal has been genotyped. Density of the test chip is indicated (e.g., GT3K from 3K chip, GT6K from 6K chip and so forth, with HD indicating 770K chip). GI indicates that the animal's genotype was imputed from progeny, while GA indicates that genomic data comes from genotyped ancestors. Breed Base Representation (BBR) is the genomic estimate of the animal's relationship to the Jersey breed reference group. Animals with a BBR of 94 or greater are reported as 100. BBRs below 94 are reported as calculated.
Official status for Jersey Haplotypes 1 and 2 based on a genotype of 6K or higher density is listed: F designating status Free, C designating status Carrier.
Bulls enrolled in the Young Sire Program or Genetic Diversity Program are marked YSP or GDP, respectively. Bulls eligible for, but not enrolled in these programs are designated GQ (qualified for YSP), DQ (qualified for GDP), or DGQ (qualified for both programs). If assigned, the NAAB code for bulls is printed.
4. The date of birth (month, day, year) and, for cows, the DHI processing center control number (CONTROL #).
5. Permanent identification of the animal, labeled by form: tattoo (right ear / left ear), American ID eartag and/or electronic ID.
6. For heifers, the percentile (P-level) of the Parent Average (PA) or genomic PTA for Jersey Performance Index™ (JPI) is printed. P-level indicates how this individual ranks compared to other heifers born in the same year. When PA JPI is not available, the P-level is based upon PA protein.
Expected Future Inbreeding (EFI), or if animal is genotyped, Genomic Estimate of Future Inbreeding (GFI). EFI estimates future progeny inbreeding, assuming that an animal is mated randomly to the current population. GFI is based on the animal's DNA test of actual homozygosity and percentages of genes in common with the genotyped Jersey population.
7. *Cows only*: Predicted Producing Ability (PPA) and Yield Deviation (YD) for milk, fat and protein. PPA predicts future production. Because PPA is determined relative to a constant genetic base, it can be used to compare one herd situation and is the most effective tool to identify cows that will be profitable milk producers. YD is the weighted average of lactation yield minus selected management and environmental factors, expressed relative to the breed base.
8. CDCB Predicted Transmitting Ability (traditional or genomic) for milk, fat and protein, Net Merit indexes (Cheese Merit dollars, CM\$; Net Merit dollars, NM\$; Fluid Merit dollars, FM\$; Grazing Merit dollars, GM\$), plus Productive Life (PL), fertility traits (Daughter Pregnancy Rate, DPR; Cow Conception Rate, CCR; Heifer Conception Rate, HCR), and Somatic Cell Score (SCS). The evaluation issue date and number of records (females) or daughters (bulls) are given, with the Reliability (%R) of the evaluation. Percentile (%ILE) indicates the animal's ranking relative to all others of its sex. PTAs can be compared to indicate which animal will, on the average, transmit higher production to offspring. The difference in PTAs between any two bulls is the amount their future daughters will differ in performance when matings are to dams of equal genetic merit.
AJCA Predicted Transmitting Ability for Type (PTAT/GPTAT), Jersey Udder Index (JUI/GJUI) and Jersey Performance Index™ (JPI/GJPI) with the date of the evaluation.
Jersey Performance Index™ combines PTA/GPTA for Protein, Fat, Functional Trait Index (FTI), PL, SCS and fertility traits (DPR, CCR and HCR), with relative weights of 43% Protein : 15% Fat : 15% FTI : 10% PL : 6% SCS : 11% combined fertility traits. JPI ranks animals for combined genetic merit (production, type, and fitness traits).
PTAT/GPTAT is the genetic evaluation for final score–type. PTAs/GPTAs for type appraisal breakdown traits are printed.
For young animals without their own performance information or that have not been genomically tested, Parent Average (PA) is calculated for milk, fat, protein, Net Merit indexes, type, and JPI. PA is the sum of 1/2 the sire's PTA and 1/2 the dam's PTA. PA estimates are also printed for appraisal breakdown traits. Reliability (%R) for these estimates is also printed.
9. Lactation records. Up to 16 records are printed, listing information in this order: age at calving, days milked, times milked per day, actual pounds milk, percent fat, actual pounds fat, percent protein, actual pounds protein, and data collection rating (DCR). If a verification test was conducted during the lactation, a V is printed. The 305-day, 2x, mature equivalent lactation average for records at least 180 days in length is also printed.
10. Type evaluations, the cow's age and final score. Final scores are: Excellent (90 and above); Very Good (80-89 inclusive); Desirable (70-79); Acceptable (60-69); and Poor (50-59). Scores for breakdown traits from the most recent appraisal are listed: ST, stature; SR, strength; DF, dairy form; RA, rump angle; RW, rump width; RL, rear leg set; FA, foot angle; FU, fore udder; RH, rear udder height; RUW, rear udder width; UC, udder cleft; UD, udder depth; TP, teat placement; TL, teat length; RTR, Rear Teat Placement-Rear View; RTS, Rear Teat Placement-Side View.
11. The sire of the animal, his registration number, and when applicable, genotype, JH1 and JH2 status, sire program and NAAB code. The CDCB genetic evaluations for milk, fat, protein, CM\$, NM\$ and FM\$; fitness traits (PL, DPR, CCR, HCR and SCS); and AJCA genetic evaluations for type are listed, with evaluation date.
12. The dam, her registration number, genotype status and haplotype test status (when applicable), permanent ID, lactation records, production summary, and genetic evaluations are given. Up to 12 lactations are printed.
13. Age and final score, with type breakdowns for last evaluation.
14. The date that this document was compiled and printed.
15. The Recorded Owner, as indicated on the records of the AJCA.
16. The Breeder of the animal (Recorded Owner of the dam at conception of animal).
17. *Females only*: Total of registered progeny, followed by registration number, sex, tattoo and genotype status (if applicable), and JPI/GJPI for the eight youngest progeny, listed in reverse birth order.
18. The paternal grandsire (*refer to 10*).
19. The paternal grandam (*refer to 11*). Latest final score and up to four lactations are printed. Cows with AJCA registration numbers below 2,300,000 or registered in other countries may not have lactations.
20. The maternal grandsire (*refer to 10*).
21. The maternal grandam (*refer to 11*). Up to 4 lactations, along with type evaluations are printed.

Since 1868,
the American Jersey Cattle Association
has provided services that

- **Increase the profitable production of Jersey milk**
- **Increase the value of and demand for Jersey milk**
- **Increase the value of and demand for U.S. Jerseys**
