Heifer Percentile Ranking Levels (P Level)

The P-level may be the most important guide on the pedigree when evaluating Jersey heifers' genetic merit. The P-level is a percentile ranking of the Parent Average (PA) Jersey Production Index™ (JPI), displayed as P0 through P9. When PA JPI is not available, percentile rankings are based on PA Protein.

The P-level indicates how one heifer ranks compared to all other Registered Jersey™ heifers born in the same year. To interpret, insert the P-level in the blank in the following statement: "This heifer has a higher PA JPI than ___0 percent of the registered Jersey heifers born in the same year." Example: A P8 heifer born in 2017 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2017.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2014 to 2018 and projected for 2019 and 2020; and also for PA Protein for 2014 to 2018, with projections for 2019 and 2020.
