AMERICAN JERSEY CATTLE ASSOCIATION

# JERSEY GENETIC SUMMARY

# Exciting Changes Coming with April Evaluations

Jersey genetics will push the reset button in April with a new look to genetic summaries. The evaluations will feature Jersey-specific health traits, base change<sub>2020</sub>, and a newly formulated Jersey Performance Index (JPI).

## Jersey-Specific Health Traits

April 7, 2020, marks the release of national genetic evaluations for six health traits that will help alleviate six costly health conditions impacting Jerseys. The traits will help build resistance against displaced abomasum, milk fever, ketosis, mastitis, metritis and retained placenta.

These unbiased evaluations will come from the Council on Dairy Cattle Breeding (CDCB), and are derived from Jersey data recorded in Dairy Herd Information (DHI) herds from across the nation. Thanks to the cooperation of Jersey dairy producers, the national collaborators' database has been established to provide the on-farm records to support a nationwide genetic evaluation system. More herds may participate by contacting your dairy records processing center or AJCA.

PTAs for each of the six health traits (below) will be the predicted daughter difference for resistance above or below the Jersey breed average. The larger the positive values, the more favorable the genetic resistance to the disorder. The genetic evaluations can help identify individuals that transmit costly difference and help manage their use in breeding programs.

## Base Change

Since 1980, the U.S. genetic base has been updated every

five years. Milking Jersey cows born in 2015 define the new base coming in April 2020. This resets the '0' point for comparison. Most PTAs will be lowered by the genetic gain because gains were made across five years. Jersey leads the way in gains for production traits across all breeds.

However, if trends were unfavorable, PTAs will generally increase. Daughter Pregnancy Rate (DPR) and Cow Conception Rate (CCR) are two traits that did not show genetic improvement in cows born from 2010 to 2014.

Base changes offer a chance to review and assess the results of prior selection decisions. CDCB offers this

recommendation, "if selection is based on standards like percentiles (recalculated every run) or by simply selecting the top-ranked bulls on an economic index of their choice, forward progress would occur, devoid of any delays."

However, the most important opportunity is to develop strategies to propel positive genetic change for the future. The AJCA Board is doing just that as they examine and evaluate the Jersey Performance Index (JPI) and make plans for modifications to the Jersey-specific selection index.

The objective of updating JPI is to reflect new research results that will allow Jersey breed progress to continue, while also ensuring that tomorrow's Jersey cattle are genetically predisposed to remain healthy, fertile, and functional at high levels of milk solids production.

Watch for more details in upcoming press releases, *Jersey Journal* announcements and education webinars.

Trait	Estimated PTA Change
Milk (pounds)	524
Fat (pounds)	25
Protein (pounds)	20
Somatic Cell Score (SCS)	0
Productive Life (month)	1.54
Livability %	0.08
Daughter Pregnancy Rate %	-0.99
Cow Conception Rate %	-0.90
Heifer Conception Rate %	0.44

Trait	Estimated PTA Change
Final Score	0.7
Stature	0.5
Strength	0.0
Dairy Form	0.4
Foot Angle	0.1
Rear Legs	0.0
Rump Angle	0.4
Rump Width	0.1
Fore Udder	0.7
Rear Udder Height	0.6
Rear Udder Width	0.2
Udder Depth	0.9
Udder Cleft	0.1
Teat Placement	0.3
Teat Length	0.0

## Description of Health Disorders

**Milk Fever or Hypocalcemia:** Typically results after calving due to low total blood calcium levels.

**Displaced abomasum:** Enlargement of the abomasum with fluid and/ or gas that caused its movement to the left or right of the abdominal cavity; the twisting blocks the digestive process and usually requires veterinary intervention.

**Retained placenta:** Retention of fetal membranes more than 24 hours after calving.

**Ketosis:** Build-up of ketone bodies that typically occurs due to negative energy balance in early lactation.

**Mastitis:** Infectious disease that causes inflammation of the mammary gland; one of the most common and costly diseases of dairy cattle.

**Metritis:** Infection of the endometrium (lining of the uterus) after calving.

<sup>1</sup> Proportion of observed differences in a trait between individuals attributed to transmittable genetic factors, rather than environmental factors

**Glossary of Terms**

**Daughter Pregnancy Rate (DPR), Cow Conception Rate (CCR), Heifer Conception Rate (HCR):** Genetic evaluations of fertility. DPR is the percentage of non-pregnant cows that become pregnant during each 21-day interval where 1% in PTA DPR equals 4 fewer days open. HCR and CCR is the percentage of inseminated heifers or cows that become pregnant at each service where 1% in PTA means more likely to become pregnant during that estrus cycle compared with an evaluation of 0.

**Early First Calving (EFC):** Measures the age at first calving in days with the sign reversed so positive PTAs are favorable.

**Expected Future Inbreeding (EFI):** Estimate of future progeny inbreeding, assuming that an animal is mated randomly.

**Genomic “G” Codes:** GT, animal has been genotyped using one of a variety of offered chip densities (e.g., GT13K with 13K chip); GI for genotype through imputation from progeny, but not genotyped; and GA, inclusion of information from genotyped ancestors.

**Genomic Future Inbreeding (GFI):** Estimate of inbreeding in future offspring, based on parent’s actual homozygosity and percentages of genes in common with the genotyped breed population.

**Genomic Predicted Transmitting Ability (GPTA):** Estimate of genetic merit for indicated trait calculated from (1) information from genotypes or imputed genotypes of ancestors DNA analysis of functional genes inherited by a particular animal; plus (2) individual performance and (3) pedigree information.

**Gestation Length (GL):** Expressed in days, PTAs represent the influence of a service sire on the gestation length a female carries a calf.

**Health Trait Index (HTI):** Ranks animals for disease resistance.

**Jersey Performance Index™ (JPI):** Ranks animals for combined genetic merit for Protein, Fat, Milk Density, Fertility, Functional Trait Index (FTI), Survival, SCS and Jersey Health Traits.

**Jersey Udder Index™ (JUI):** Based on the Functional Trait Index (FTI) weightings for udder traits (*refer to formula, page 6*).

**Livability (LIV):** Measures cow’s ability to stay alive while on the farm.

**Net Merit dollars (NM\$, also CM\$, FM\$ and GM\$):** Expected lifetime profit as compared with the breed base cows born in 2010, for four production/economic conditions.

**Parent Average:** Estimate of an individual’s eventual PTA based on the average of the parents’ traditional PTAs.

**Percentile:** A ranking relative to the population. For example, a bull with a 90 percentile ranking or a heifer that is a P9 is ranked higher than 90 percent of the population.

**Predicted Transmitting Ability (PTA):** The best predictor of genetic merit; specifically what a bull or cow is expected to transmit for a particular trait to their offspring. *See also GPTA (above)*.

**Productive Life (PL):** Measures a cow’s ability to avoid either dying on the farm or being culled.

**Sire Conception Rate (SCR):** Phenotypic predictor of bull fertility, expressed as a relative conception rate, measured for the first seven (7) breedings of the cow (no heifer breedings).

**Somatic Cell Score (SCS):** Indicator trait for mastitis resistance based on the direct measure of somatic cells in milk samples.

# 2020 Jersey Performance Index™ (JPI)

Updates to Jersey Performance Index™ authorized by the AJCA Board of Directors were implemented with the April 2020 official CDCB-AJCA genetic evaluations. JPI<sub>2020</sub> predicts the efficiency of production by expressing lifetime production of fat and protein per unit of feed consumed. New traits included in JPI<sub>2020</sub> are the six Jersey Health Traits (<https://www.uscdcb.com/wp-content/uploads/2020/01/CDCB-Jersey-Health-Traits.pdf>) and two linear type traits—Rear Teat Placement Side View and Rear Teat Placement Rear View ([https://www.usjersey.com/Portals/0/AJCA/2\\_Docs/Appraisal/19-Appraisal-Standards.pdf](https://www.usjersey.com/Portals/0/AJCA/2_Docs/Appraisal/19-Appraisal-Standards.pdf)).

As with JPI<sub>2017</sub>, JPI<sub>2020</sub> applies the key principles of Jersey sustainability identified by researchers Jude Capper and Roger Cady (J. L. Capper & R. M. Cady (2012). J. Dairy Sci. 95: 165-176).

The three primary drivers of U.S. dairy cow sustainability are production, milk nutrient density, and body size. Specifically, Jerseys need to increase milk yield, maintain—or better improve—component levels, and maintain an optimum body size. The focus on Jersey sustainability was retained for JPI<sub>2020</sub>.

Traits and their percentage of JPI<sub>2020</sub> are 27% PTA protein; 19% PTA fat; 3% Milk Density; 19.4% Functional Trait Index (subsets are Jersey Udder Index™, Feet and Legs and Body); 14.5% Fertility (includes 9% Daughter Pregnancy Rate, 3.5% Cow Conception Rate and 2% Heifer Conception Rate); 8% Survival (includes 5% Productive Life and 3% Livability); 4.5% Somatic Cell Score; and six new Jersey Health Traits at 4.6% (Milk Fever 1.0%; Displaced Abomasum 1.0%; Ketosis 0.4%; Mastitis 1.9%; Metritis 0.2% and Retained Placenta 0.1%). (Fig. 1)

Milk Density is calculated by subtracting the sum of PTA Protein and PTA Fat divided by .09 from PTA Milk.

## Calculation of the Jersey Performance Index™

Beginning with April 2020 genetic evaluations, JPI™ is calculated as follows:

$$\begin{aligned} \text{JPI}_{2020} = & (27 \times \text{PTA protein} / \text{SD}) + (19 \times \text{PTA fat} / \text{SD}) + (-3 \times \text{Milk Density} / \text{SD PTA milk}) \\ & + (5 \times \text{PTA Productive Life} / \text{SD}) + (3 \times \text{PTA Livability} / \text{SD}) \\ & + [-4.5 \times (\text{PTA Somatic Cell Score} - 3.0) / \text{SD}] \\ & + (9 \times \text{PTA Daughter Pregnancy Rate} / \text{SD}) + (3.5 \times \text{PTA Cow Conception Rate} / \text{SD}) \\ & + (2 \times \text{PTA Heifer Conception Rate} / \text{SD}) + \text{Functional Trait Index}_{2020} + \text{Health Trait Index}_{2020} \end{aligned}$$

where Milk Density = PTA Milk - ((PTA Fat + PTA Protein) / .09), Functional Trait Index equals the PTAs of linear type traits weighted by their relative economic contribution to JPI<sub>2020</sub> and Health Trait Index (see Table 2).

Overall, 49% of the emphasis in JPI<sub>2020</sub> is on production, 27% on fitness, 19.4% on functional type and 4.6% on disease resistance.

The goal behind the update to JPI formula was logical. It allows Jersey breed progress to continue, while ensuring tomorrow's Jersey cattle are genetically predisposed to remain healthy, fertile and function while producing high levels of milk solids.

Dr. Kent Weigel, University of Wisconsin-Madison, led the research and development of JPI<sub>2020</sub>. The updated formula is derived from a prediction of efficiency for more than 300,000 Jersey females born since 2010 who have lactation and type information.

Lifetime production was tallied for each female. Individual

type traits were used to predict body weight, which was then used to determine their lifetime feed intake. The ratio of lifetime production to lifetime feed intake was predicted using a model that included individual genetic evaluations for production traits, linear type traits, somatic cell score, productive life, livability and fertility measures. Contribution of the six health traits

was determined by the amount of variation they explained in productive life and livability.

JPI is based on the ratio of lifetime combined fat and protein to lifetime dry matter intake, relative to other cows in the same herd born in the same year. Feed during the rearing period is considered, as are differences in maintenance intake for cows of

different predicted body size. For cows that are still alive, we take how much they have produced and eaten to date.

## Milk Density

Milk Density (3% of the index), formerly named CFP Milk, is a breed-specific adjustment to PTA Milk based on the target that every pound of PTA milk must include 0.09 pounds of combined fat (continued on next page)

**Table 1. History of Traits and Weights (%) Used to Calculate Production Type Index (1998) and Jersey Performance Index™.**

Year	Protein	Fat	CFP Milk/ Milk Density	FTI	PL	LIV	SCS	FUI	DPR	CCR	HCR	HTI
1998	55.5	22.2		16.7			5.6					
2002	50.0	20.0		15.0	5.0		5.0	5.0				
2005	50.0	20.0		15.0	3.75		3.75	3.75	3.75			
2006	40.0	20.0		15.0	12.0		3.0	3.0	7.0			
2010	42.0	15.0		15.0	12.0		6.0		10.0			
2015	43.0	15.0		15.0	10.0		6.0		7.0	2.0	2.0	
2017	30.0	15.0	8.0	20.0	6.0	4.0	6.0		7.0	2.0	2.0	
2020	27.0	19.0	3.0	19.4	5.0	3.0	4.5		9.0	3.5	2.0	4.6

and protein. Milk Density is based on the idea it is preferable to have total yield of pounds fat and pounds protein come from more concentrated milk instead of a greater volume of watery milk.

For example, two bulls each have 75 pounds of combined fat and protein, but a large difference in their PTA Milk of 250 compared to 1,250 pounds. Relative to the target of 0.09 pounds of combined fat and protein in one-pound PTA milk, the bull with a PTA Milk of 250 exceeds that concentration and will gain approximately three JPI™ points. The other bull, at PTA Milk of 1,250 pounds, transmits more water relative to components. Therefore, he will lose approximately two JPI™ points.

The Milk Density attribution will result in a difference of five JPI™ points between the two example bulls.

### Type Within Production

Of the components of JPI™, only one—the AJCA Functional Trait Index (FTI)—captures the effects of type traits within production on lifetime efficiency. It assesses how functional type traits are important to the Jersey cow's economic survival. As such, it pinpoints where improvement is needed and needed most, and where opportunities for further gains are possible.

Table 2 shows going forward, what will make the most difference in improving Jersey profitability is increasing selection pressure on udder and body traits. Some traits are more important than others. Among traits in the Jersey Udder Index™ (JUI), which is derived from FTI, Udder Depth is the most important, followed by Fore Udder Attachment and Rear Udder Height. JUI is reported as JPI™ points; in other words, how many points udder traits add (or subtract) from Jersey Performance Index™.

### Health Traits

The April 2020 genetic evaluations mark the release of six health traits that will help alleviate costly health conditions impacting Jerseys. These traits will help build resistance against displaced abomasum, milk fever, ketosis, mastitis, metritis and retained placenta.

PTAs for each of the health traits will be the predicted daughter difference for resistance above or below the Jersey breed average. The larger the positive values, the more favorable the genetic resistance to the disorder. These genetic evaluations can help identify individuals that transmit costly difference and help manage their use in breeding programs.

The traits and their weights in JPI<sub>2020</sub> are:

- Milk Fever or Hypocalcemia: (1.0%) Typically results after calving due to low total blood calcium levels.

- Displaced abomasum: (1.0%) Enlargement of the abomasum with fluid and/or gas that caused its movement to the left or right of the abdominal cavity; the twisting blocks the digestive process and usually requires veterinary intervention.

- Ketosis: (0.4%) Build-up of ketone bodies that typically occurs due to negative energy balance in early lactation.

- Mastitis: (1.9%) Infectious disease that causes inflammation of the mammary gland; one of the most common and costly diseases of dairy cattle.

- Metritis: (0.2%) Infection of the endometrium (lining of the uterus) after calving.

- Retained placenta: (0.1%) Retention of fetal membranes more than 24 hours after calving.

Combined as the Health Trait Index (HTI), it is reported as JPI™ points like JUI™ and represents 4.6% of JPI<sub>2020</sub>.

### Major Categories

The objective of Jersey Performance Index™ is to increase lifetime efficiency. Regrouping traits by functional categories reveals a set of six factors that determine whether cows put money into your pocket, and how much. **Production** receives 49% of the emphasis in the new formula. There is 13.7 % on **udder health** by combining direct selection for lower Somatic Cell Score (especially important to capture quality premiums) and JUI™. **Fertility** at 14.5% includes Daughter Pregnancy Rate, Cow Conception Rate and Heifer Conception Rate. **Survival** is weighted at 8.2% through PTAs

for Productive Life and Livability plus the mobility traits (foot angle, rear legs) in FTI. Lastly, the Jersey-specific Body Weight Composite, at 10%, selects for **optimum body size**, which is directly related to feed intake directed to body maintenance versus production. Lastly, the Health Trait Index at 4.6% selects for **disease resistance**.

### Summary

Jersey Performance Index™ (JPI™) is a breed-specific selection tool that has been continually reviewed and updated based on sound science and relative to current economic conditions. “Jersey Performance Index<sub>2020</sub> focuses on the Lifetime Efficiency of the

Jersey cow in a way no prior versions have done,” said Neal Smith, Executive Secretary and CEO of the American Jersey Cattle Association.

“The updated formula combines leading-edge methods which result in a healthier cow who can produce higher concentrations of

components in her milk. While accomplishing all this, JPI<sub>2020</sub> helps achieve optimum body size for greater feed and overall efficiency and sustainability, while improving on the Jersey cow's long appreciated fertility.”

### Calculation of the Jersey Udder Index™

This index is the sum of PTAs for udder traits multiplied by their percentage contribution to the animal's Jersey Performance Index<sub>2020</sub>:

$$\begin{aligned}
 JUI_{20} = & [(1.7 \times FU / SD) + (2.5 \times RH / SD) + (0.1 \times RUW / SD) \\
 & + (2.5 \times UD / SD) + (0.2 \times UC / SD) + (0.2 \times TP/SD) \\
 & + (0.8 \times RTPS/SD) + (0.6 \times RTPR/SD) + (-0.6 \times TL/SD)]
 \end{aligned}$$

# Jersey Performance Index 2020 vs 2017

## Jersey Performance Index<sub>2020</sub>

**49 % Production**

- 27 - PTA Protein

## Heifer and Bull Percentile Ranking Levels (P-Level)

The P-level is a useful tool to evaluate genetic merit of young Registered Jerseys™. It is a percentile ranking of the animal's Jersey Production Index™, displayed as P0 through P9. P-level is based upon Parent Average JPI, or genomic JPI when available.

The P-level indicates how one animal ranks compared to all other registered Jerseys of the same sex born in the same year. To interpret, insert the P-level in the blank in the following statement: "This heifer (bull) has a higher PA JPI than \_\_\_0 percent

of the registered Jersey heifers (bulls) born in the same year." *Example:* A P8 heifer born in 2018 has a higher PA JPI than 80 percent of the Registered Jersey heifers born in 2018.

The tables show means and minimum values for percentile ranking levels based on Parent Average JPI for the birth years 2015 to 2018, with projections for 2019 and 2020.

P-levels are printed on Official Performance Pedigrees for heifers, but not for bulls.

**Table 1. Heifer P-Levels for Jersey Performance Index™**

# AJCA Pedigree Recording and Registry Status

Effective March 11, 2017, Revised November 2, 2018

The *Rules for the Registration and Transfer of Jersey Cattle* define the programs and procedures approved by the Board of Directors for recording animals in the permanent database of the American Jersey Cattle Association (AJCA). The following information is required:

- (a) birth date of the animal,
- (b) permanent identification in the form of tattoo in the ear or AJCA-approved double-matching tamper-evident ear tags, and
- (c) parent information (*pedigree*).

The Association records descendants of animals registered in the AJCA Herd Register through rules for the Herd Register and Generation Count system. As required, prefix and suffix designations will be added per AJCA rules. The Association also records registered Jersey cattle imported from countries having recognized herd books.

## Herd Register

Animals with Herd Register (HR) status have seven (7) or more unbroken generations of known Jersey ancestors that are recorded by the Association. The Association issues a green-bordered *Certificate of Registration* for these animals.

## Generation Count Recording

The Association also records:

- (a) animals that exhibit the characteristics of Jersey cattle but lack complete documentation of parentage, and
- (b) animals that have one known and AJCA-recorded Jersey parent and a parent of another breed.

With the continued use of AJCA Herd Register status bulls, progeny will progress to HR status (*see Tables 1 and 2*).

1. Females are recorded at all Generation Counts.
2. Generation Count {1} is assigned to the female that has one known parent (either sire or dam) recorded by the AJCA. The other parent may be completely unknown or of another breed. If both parents are unknown, the animal may be qualified for recording by being genotyped (*see notes, Table 1*).
3. Until November 1, 2019, bulls may be recorded with a minimum Generation Count of {3} after additional stipulations are met (*see Requirements to Record Bulls*).
4. The numerical designation of progeny will increase by one (1) from the Generation Count of the sire or dam, whichever

is lowest (*refer to tables*).

5. Progeny of Generation Count {6} parents have Herd Register status and do not have a suffix in their registration names.
6. When an unknown animal or animal of another breed is introduced to an animal's pedigree, the Generation Count will be reset to start at {1}.

The Generation Count suffix is an integral part of the animal name. The gold-bordered *Certificate of Identification* is issued to animals recorded at Generation Counts 1, 2 and 3. Generation Count 4, 5 and 6 animals are issued the green-bordered *Certificate of Registration*.

## Requirements to Record Bulls

Males that can be recorded with Herd Register (HR) status do not have to be genotyped in order to be registered.

Males that will have a Generation Count must have (1) a minimum Generation Count of 3; (2) the bull, its sire and its dam must be genotyped; and (3) the bull must have a Breed Base Representation (BBR) equal to or greater than 87 (*AJCA Board of Directors action, March 11, 2017*). In addition, effective January 1, 2019, all Generation Count and JX males must be genotyped for declared undesirable non-Jersey traits as a condition of registration. Test results must be reported to AJCA and any positive carriers will be reported on animal performance documents (*AJCA Board of Directors action, November 2, 2018*).

Effective November 1, 2019, bulls that have a Generation Count and are recorded on and after November 1, 2019 must have a minimum Generation Count of 4 and Breed Base Representation (BBR) reported as 100 (*AJCA Board of Directors action, November 2, 2018*).

## Unregistered (UR) Recording

Animals with permanent identification that are not qualified to be recorded in the Herd Register or with a Generation Count shall be recorded with prefix "UR" and Generation Count 0 included in their name. The *Certificate of Identification* is issued to the owner.

## Prefixes and Suffixes Assigned by Rule

All animals having one (or more) ancestor(s) of another breed within six (6) generations shall have the letters "JX" included in

their names as a prefix.

The following letters shall be included in animal names as a suffix as applicable: "ET" for animals produced through embryo transfer, "ETS" for animals resulting from split embryos, and "ETN" for animals resulting from nuclear transfer (cloning); "P" for polled animals with one polled parent, "PP" for animals determined to be homozygous polled by testing, consistent with their pedigree; "LL" for declared carrier of Limber Legs, and "RVC" for declared carrier of Rectovaginal Constriction.

Table 1. AJCA Recording System for Females, effective March 12, 2016

Dam Status	Generation Count of Sire						HR
	UR {0}	{2}	{3}	{4}	{5}	{6}	
	Generation Count of Offspring ( <i>see Notes</i> )						
UR {0}	UR {0} or {1}*	{1}	{1}	{1}	{1}	{1}	{1}
{1}	{1}	{2}	{2}	{2}	{2}	{2}	{2}
{2}	{1}	{3}	{3}	{3}	{3}	{3}	{3}
{3}	{1}	{3}	{4}	{4}	{4}	{4}	{4}
{4}	{1}	{3}	{4}	{5}	{5}	{5}	{5}
{5}	{1}	{3}	{4}	{5}	{6}	{6}	{6}
{6}	{1}	{3}	{4}	{5}	{6}	HR	HR
HR	{1}	{3}	{4}	{5}	{6}	HR	HR

Female recording starts at Generation Count 1, either (a) by pedigree listing a known and AJCA-recorded Jersey parent; or (b) qualified by genotyping.

\* Recorded with prefix UR unless qualified by genotyping to be recorded with GC {1}.

## Eligibility for National Awards and Shows

Females with Generation Count 4 or greater are eligible for Honor Roll, Hall of Fame, and National Class Leader recognition, the President's Trophy, Hilmar Cheese Award, Living Lifetime Production Contest and National Jersey Youth Production Contest, and included in calculations of AJCA herd lactation and Jersey Performance Index™ averages.

Animals recorded at Generation Count 4 and higher are eligible for national shows and AJCA-designated regional shows.

## Breed Base Representation

Breed Base Representation (BBR) is a genomic trait that assesses the degree to which alleles in an individual animal's genome are in common with the allele frequency of the breed reference group for Ayrshire, Brown Swiss, Guernsey, Holstein and Jersey. The more an animal's genetic make-up resembles its breed reference group, the higher its BBR for the primary breed. Rules and publication policies for BBR are established by the Council on Dairy Cattle Breeding (CDCB).

### Reference Group

The 3,886 A.I. bulls in the Jersey reference group (*April 2019*) were determined by CDCB selection criteria:

1. are genotyped, *and*
2. have daughters with milk evaluations, *and*
3. all 30 animals in the 5-generation breed stack are identified with the breed code Jersey; *and*
4. if born 2000 and later, all ancestors in the 5-generation pedigree are known.

Reference groups are updated annually with the April official genetic evaluations.

### Reporting of BBR

CDCB policy is to report BBR values of 94 or greater for one breed as 100. BBRs below 94 are reported as calculated.

BBR is calculated and reported only once for all genotyped animals, unless re-genotyped with a higher density chip.

### Understanding BBR

Variation in genomic BBR values is explained by these factors.

*Within Breed.* Animals whose ancestors have been accurately documented purebreds for many generations often obtain a BBR for the primary breed less than 100, simply due to the calculation procedures.

BBRs in the range of 90 to 97 can reveal the presence of outcross bloodlines. When an animal is unrelated to the North American population or has bloodlines not well represented among the bulls included in the breed reference group, its BBR could well be in the mid-90s.

*Common Alleles.* Precise percentages of breed sources are not possible simply because animals vary. Also, because there are com-

mon alleles across breeds, the contribution from the primary breed could be off by 5% or even more from that derived.

*Crossbreeding.* A BBR lower than 90 usually indicates evidence of crossbreeding. In some cases, determining whether *crossbreeding or outcross bloodlines* is the basis for a lower relationship to the breed reference group can be difficult. Mistakes will be made if conclusions are drawn without considering that BBR numbers for the evaluated breeds could vary by as much as 5% from what is expected, and occasionally even more.

BBR is effective at detecting the presence of genetics from other breeds when such other breeds have provided a significant percentage of the alleles. Still, spread in BBR numbers is to be expected. Analysis of BBRs of animals that have three grandparents of breed X and one grandparent of breed Y (*expected breed alleles 75% and 25%*) show primary breed BBRs as low as 70 or as high as 80, simply due to limitations of the method. Some animals will

deviate even more due to the random nature of which chromosomes are transmitted from grandparents through their sire and dam.

*Breeds Referenced.* Five dairy cattle breeds have enough A.I. bulls genotyped to form a breed reference group. The BBR for each animal is determined relative only to these five groups, and even if all of an animal's genes do not come from the referenced breeds.

*Pedigree Information.* Missing or limited pedigree information may make it difficult to determine whether crossbreeding or outcross bloodlines is the reason for a relatively low BBR.

Table 2. AJCA Recording System for Males (see Notes)

Dam Status	Generation Count of Sire						HR
	UR {0}	{2}*	{3}	{4}	{5}	{6}	
	Generation Count of Offspring						
UR {0}							
{1}							
{2}		{3}	{3}	{3}	{3}	{3}	{3}
{3}		{3}	{4}	{4}	{4}	{4}	{4}
{4}		{3}	{4}	{5}	{5}	{5}	{5}
{5}		{3}	{4}	{5}	{6}	{6}	{6}
{6}		{3}	{4}	{5}	{6}	HR	HR
HR		{3}	{4}	{5}	{6}	HR	HR

**NOTES:** Bulls at Generation Counts 3 through 6 will be recorded with the UR {0} status until they are (a) genotyped along with both sire and dam; (b) meet minimum requirements for Breed Base Representation (BBR) in effect on recording date; and (c) are genotyped for declared undesirable non-Jersey traits defined in the Policy on Undesirable Genetic Factors (*revised November 2, 2018*).

\* Bulls recorded by AJCA according to rules in effect prior to March 14, 2015.

### Publication of BBR

The AJCA publishes genomic BBR on pedigree, performance and genetic evaluation reports, and JMS sale catalog pedigrees.

The combination of AJCA registry status and BBR criteria are used to publish primary reports in the *Jersey Genetic Summary* ("Green Book"), as follows:

- *Males:* (a) all Herd Register and also Generation Count 4-6 bulls with BBRs expressed as 100; and (b) all Generation Count 3 bulls and Generation Count 4-6 bulls with BBRs less than 94;
- *Genotyped females:* (a) all Herd Register and also Generation Count 4 and greater with BBRs expressed as 100; and (b) all Generation Count 3 females and Generation Count 4-6 females with BBRs less than 94;
- *Non-genotyped females:* (a) all Herd Register; and (b) Generation Count 3 through 6.

Bulls must have their own genotype and have a BBR to be included in lists of *Active & Foreign Bulls Marketed in the U.S.*

*Effective November 2, 2018, location December 2018 Jersey Genetic Summary*

# Information Presented on AJCA Performance Pedigrees

1. AJCA registration name and registration number.  
Prefix and suffixes designate registry status if other than Herd Register (*seven or more generations of AJCA-recorded ancestry with no ancestor of another breed*).  
The Generation Count suffix indicates that the animal's pedigree includes either (a) an unknown animal or (b) an animal of another breed. The number between braces { } indicates generations of AJCA-recorded ancestry from 0 to 6.  
The prefix JX indicates that the animal has one or more ancestors of another breed within six (6) generations.  
The prefix UR is assigned when an animal has permanent identification but does not meet AJCA pedigree requirements.  
Other suffixes used are P (polled); PP (tested homozygous polled); ET (embryo transfer); ETS (split embryo); ETN (nuclear transfer, cloning); LL (carrier of genetic abnormality Limber Legs); RVC (carrier of genetic abnormality Rectovaginal Constriction); PTL (progeny tested for LL); and PTR (progeny tested for RVC).
2. GT indicates that an animal has been genotyped. Density of the test chip is indicated (e.g., GT29K from 29K chip). GI indicates that the genotype was imputed from progeny; and GA, that genomic data comes from genotyped ancestors.  
Breed Base Representation (BBR) is the genomic estimate of the animal's relationship to the Jersey breed reference group. BBR is printed only for genotyped animals. A BBR of 94 or greater is reported as 100. BBRs below 94 are reported as calculated.  
Official status for Jersey Haplotype 1 based on a genotype of 6K or higher density is listed: F designating status Free, C designating status Carrier.  
*Males only:* If assigned, the NAAB code is printed.
3. The date of birth (month, day, year) and, for cows, the DHI processing center control number (CONTROL #).
4. Permanent identification of the animal, labeled by form: tattoo (right ear / left ear), American ID eartag and/or electronic ID.
5. For heifers, the percentile (P-level) of the Parent Average (PA) or genomic PTA for Jersey Performance Index™ (JPI) is printed. P-level indicates how this individual ranks compared to other heifers born in the same year. When PA JPI is not available, the P-level is based upon PA protein.  
Expected Future Inbreeding (EFI), or if animal is genotyped, Genomic Estimate of Future Inbreeding (GFI). EFI estimates future progeny inbreeding, assuming the animal is mated randomly to the current population. GFI is based on the animal's DNA test of actual homozygosity and percentages of genes in common with the genotyped Jersey population.
6. *Cows only:* Predicted Producing Ability (PPA) and Yield Deviation (YD) for milk, fat and protein. PPA predicts future production. Because PPA is determined relative to a constant genetic base, it is the most effective tool to identify cows that will be profitable milk producers across herds. YD is the weighted average of lactation yield minus selected management and environmental factors, expressed relative to the breed base.
7. CDCB Predicted Transmitting Ability (traditional or genomic) for milk, fat and protein, Net Merit indexes (Cheese Merit dollars, CM\$; Net Merit dollars, NM\$; Fluid Merit dollars, FM\$; Grazing Merit dollars, GM\$), plus Productive Life (PL) and Livability (LIV), fertility traits (Daughter Pregnancy Rate, DPR; Cow Conception Rate, CCR; Heifer Conception Rate, HCR), and Somatic Cell Score (SCS).  
The evaluation issue date and number of records (females) or daughters (bulls) are given, with the Reliability (%R) of the evaluation. Percentile (%ILE) indicates the animal's ranking relative to all others of its sex. PTAs can be compared to indicate which animal will, on the average, transmit higher production to offspring. The difference in PTAs between any two bulls is the amount their future daughters will differ in performance when matings are to dams of equal genetic merit.  
AJCA Predicted Transmitting Ability for Type (PTAT/GPTAT), Jersey Udder Index (JUI/GJUI) and Jersey Performance Index™ (JPI/GJPI) with the date of the evaluation.  
Jersey Performance Index<sub>2017</sub>™ ranks animals by combined genetic merit for 12 traits (*with weights*): 30% Protein : 15% Fat : 8% CFP Milk : 12.8% Jersey Udder Index™ : 7% Body Weight Composite : 7% DPR : 6% SCS : 6% PL : 4% LIV : 2% CCR : 2% HCR : 0.2% Mobility.  
PTAT/GPTAT is the genetic evaluation for final score–type. PTAs/GPTAs for type appraisal breakdown traits are printed.  
Genotyped animals are evaluated on a separate single (S) breed basis or on a multiple (M) breed blended basis depending on their genetic make-up. S designations are for BBR ≥ 90 and M is a result of BBR < 90.  
For young animals without their own performance information or that have not been genomically tested, Parent Average (PA) is calculated for milk, fat, protein, Net Merit indexes, type, and JPI. PA is the sum of 1/2 the sire's PTA and 1/2 the dam's PTA. PA estimates are also printed for appraisal breakdown traits. Reliability (%R) for these estimates is also printed.
8. Lactation records. Up to 16 records are printed, listing information in this order: age at calving, days milked, times milked per day, actual pounds milk, percent fat, actual pounds fat, percent protein, actual pounds protein, and data collection rating (DCR). If a verification test was conducted during the lactation, a V is printed. The 305-day, 2x, mature equivalent lactation average for records at least 180 days in length is also printed.
9. Type evaluations, the cow's age and final score. Final scores are: Excellent (90 and above); Very Good (80-89 inclusive); Desirable (70-79); Acceptable (60-69); and Poor (50-59). Scores for breakdown traits from the most recent appraisal are listed: ST, stature; SR, strength; DF, dairy form; RA, rump angle; RW, rump width; RL, rear leg set; FA, foot angle; FU, fore udder; RH, rear udder height; RUW, rear udder width; UC, udder cleft; UD, udder depth; TP, teat placement; TL, teat length; RTR, Rear Teat Placement-Rear View; RTS, Rear Teat Placement-Side View.
10. The sire of the animal, his registration number, and when applicable, genotype, JH1 status, sire program and NAAB code. The CDCB genetic evaluations for milk, fat, protein, CM\$, NM\$, FM\$, and GM\$; fitness traits (PL, LIV, DPR, CCR, HCR and SCS); and AJCA genetic evaluations for type are listed, with evaluation date.
11. The dam, her registration number, genotype status and haplotype test status (when applicable), permanent ID, up to 12 lactation records, production summary, and genetic evaluations are given.
12. Age and final score, with type breakdowns for last evaluation.
13. The Recorded Owner, as indicated on the records of the AJCA.
14. The Breeder of the animal, defined as the Recorded Owner of the dam at conception of animal.
15. *Females only:* Total of registered progeny, followed by registration number, sex, tattoo and genotype status (if applicable), and JPI/GJPI for the eight youngest progeny, listed in reverse birth order.
16. The paternal and maternal grandsires (*refer to 11*).
17. The paternal grandam (*refer to 12*), latest final score and up to four lactations. Cows with AJCA registration numbers below 2,300,000 or registered in other countries may not have this information.
18. The maternal grandam (*refer to 12*), up to four lactations, along with type evaluations are printed.

## Herd Register or Generation Count 4-6 and BBR 100: Code A and F Bulls - Pedigree and EFI/GFI April 2020

This report lists all Code A & F bulls marketed in the U.S. ranked by Jersey Performance Index (JPI), with their NAAB Code and Short Name, plus sire and maternal grandsire. At the far right is the bull's Expected Future Inbreeding (EFI) estimate or, if he is genomically tested, the genomic estimate of future inbreeding (GFI). EFI/GFI have nearly the same interpretation and provide Jersey breeders an important tool for managing inbreeding levels.

The USDA-Animal Improvement Programs Laboratory calculates the EFI of future progeny based on a random sample of 1,000 potential mates born in the last five (5) years obtained from the AJCA database. Genotypes allow measuring actual homozygosity and percentages of genes in common instead of the expected fractions computed from pedigrees. For GFI, the reference population is all genotyped animals born in the last 10 years.

## Generation Count 3 or GC 4-6 with BBR 93 and Lower: Code A and F Bulls - Pedigree and EFI/GFI April 2020

This report lists all Code A & F bulls marketed in the U.S. ranked by Jersey Performance Index (JPI), with their NAAB Code and Short Name, plus sire and maternal grandsire. At the far right is the bull's Expected Future Inbreeding (EFI) estimate or, if he is genomically tested, the genomic estimate of future inbreeding (GFI). EFI/GFI have nearly the same interpretation and provide Jersey breeders an important tool for managing inbreeding levels.

The USDA-Animal Improvement Programs Laboratory calculates the EFI of future progeny based on a random sample of 1,000 potential mates born in the last five (5) years obtained from the AJCA database. Genotypes allow measuring actual homozygosity and percentages of genes in common instead of the expected fractions computed from pedigrees. For GFI, the reference population is all genotyped animals born in the last 10 years.

**PART I: MALES**

**Section C**

**Consolidated Reports and Lists: Bulls  
Marketed in the U.S.**

**April 2020**

## Sire Conception Rate: All Bulls Listed in NAAB Stud Code Order

Sire Conception Rate (SCR) is a national measure of A.I. bull fertility. For an evaluation to be publishable, a Jersey bull must have an A.I. status other than inactive and cannot be more than 13 years old. Bulls must also have at least 200 services in the last four years, 100 breedings in the most recent 12 months, and have been used in at least 10 herds.

SCR is expressed as the bull's difference from the average of evaluated bulls, which

is set at 0.0 for each evaluation. For example, a bull with an SCR of 5.0 produced a conception rate 5.0% above average.

Bulls are listed in NAAB Code order and sorted within A.I. marketing organizations. Status codes are: A, Active A.I.; C, semen collected; F, foreign-sampled, semen available; G, genomically tested and marketed bull; I, inactive A.I.; L, limited use; N, non-A.I.; and P, multiherd sampled.

# April 2020, Young Sires with NAAB Stud Codes

This report lists all bulls, regardless of registry status, born since October 1, 2017 and assigned stud codes by the National Association of Animal Breeders. Bulls assigned marketing code G are not listed (refer to separate report in Section II). Bull short names, sires and maternal grandsires are listed. Genotype status is indicated by genotype chip density printed to the right of the AJCA Registration Number. Genomic PTAs for Jersey Performance Index™, milk, fat, protein, Somatic Cell Score, Productive Life, Daughter Pregnancy Rate, Net Merit dollars, Jersey Udder Index™ and Expected Future Inbreeding (GFI) are listed.

#### **Herd Register or Generation Count 4-6 and BBR 100**

**April 2020**

# Herd Register or Generation Count 4-6 and BBR 100: Top 500 Females by Genomic JPI™ April 2020

This list ranks by GJPI, the top 500 females having Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information. Ties are broken by PTA protein.

# Herd Register or Generation Count 4-6 and BBR 100: Top 200 Cows Ranked by Genomic JPI™ April 2020

This list ranks by GJPI, the top 200 cows with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. Cows must have their own genotype, have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on April 1, 2020. Ties are broken by PTA protein.

# Herd Register or Generation Count 4-6 and BBR 100: Top 100 Heifers for Genomic JPI™ April 2020

This list ranks by GJPI, the top 100 heifers with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. The list is organized by sire groups. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information. Genotype source is identified by chip density in the column labeled GT.

# Herd Register or Generation Count 4-6 and BBR 100: Top 100 Polled Females by Genomic JPI™ April 2020

This list ranks by GJPI, the top 100 polled females recorded with Herd Register status or that are Generation Count 4 to 6 with a BBR of 100. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information.

## **PART II: FEMALES**

### **Section B**

**Generation Count 3 or  
GC 4-6 with BBR 93 and Lower**

**April 2020**

## Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Females by Genomic JPI™ (GJPI) April 2020

This list ranks by GJPI, the top females recorded at Generation Count 3 or GC 4 through 6 with a BBR 93 and lower. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information. Ties are broken by PTA protein.

Generation Count: Top Females (GT) - Page 1

## Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Cows Ranked by Genomic JPI™ April 2020

This list ranks by GJPI, the top cows recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. Cows must have their own genotype, have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on April 1, 2020. Ties are broken by PTA protein.

# Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Heifers for Genomic JPI™ April 2020

This list ranks by GJPI, the top heifers recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. The list is organized by sire groups. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information. Genotype source is identified by chip density in the column labeled GT.

## Generation Count 3 or GC 4-6 with BBR 93 and Lower: Top Polled Females by Genomic JPI™ April 2020

This list ranks by GJPI, the top polled females recorded at Generation Count 3 or GC 4 through 6 with a BBR of 93 and lower. To be included, they must have their own genotype; chip density is listed in the GT column. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Heifers must be no older than three years of age on April 1, 2020 and not have a GPTA based on lactation information.

# Herd Register: Top 200 Cows Ranked by Traditional JPI™ April 2020

The top 200 cows recorded in the AJCA Herd Register are listed in rank order for traditionally calculated Jersey Performance Index™ (JPI). Ties are broken by PTA protein. Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on April 1, 2020.

Traditional Evaluations**

**April 2020**

# Generation Count 3 - 6: Top Cows Ranked by Traditional JPI™ April 2020

This list ranks the top cows recorded at Generation Counts 3 through 6 for traditionally calculated Jersey Performance Index™ (JPI). Cows must have calved within the past 27 months and not have a termination code associated with the current lactation. Cows that do not have linear type information are identified by a 0 (zero) in the number of type records (REC) column. They are included in the JPI ranking by using a Parent Average estimate for Functional Trait Index (FTI), but only if the cow was less than four years of age on April 1, 2020.

**Herds**

**April 2020**

## REAP Herds Ranked by Average Jersey Performance Index™ (JPI)

The top 25% of herds ranked by average Jersey Performance Index™ are listed. Herds must be enrolled in the AJCA REAP program and have a minimum of 10 cows with JPIs. The average includes only Herd Register and Generation Count 4, 5 and 6 cows that have calved within the past 15 months with no termination code associated with the current lactation. Herds with same JPI average are ranked by the average for PTA protein.

Apr 2020																	
Breed Averages and Standard Deviations based on 105,188 cows in 696 currently enrolled REAP herds.
